EXECUTIVE SUMMARY

This traffic impact analysis (TIA) has been prepared to assess the potential circulation impacts associated with the proposed Pardee Homes Butterfield Specific Plan in the City of Banning (City). The proposed project consists of approximately 1,543 acres, which will include residential uses, a golf course, parks, open space, school sites, and commercial uses. The Butterfield Specific Plan is an amendment of the previously adopted Deutsch Specific Plan (1993) on the same site in the City. The Butterfield Specific Plan proposes a use intensity that is comparable to the 1993 Specific Plan. The City's January 2006 General Plan includes this intensity of use on the subject site.

As included in the Scope of Work for the TIA, approved by the City, year 2042 was identified as the project build-out year based on initial project uses not generating traffic until at least 2012 and the project building out over a 30-year period from 2012 to 2042. Traffic analysis has been conducted for year 2022, when an approximation of an initial phase (Phase I) of the project may be completed and for year 2032 when an approximation of a second phase (Phase II) of the project may be completed. The study does not include I-10/Highland Home Road interchange under any of the analysis scenarios, since it is not a funded project and it is not recognized or approved by the California Department of Transportation (Caltrans) or the Federal Highway Administration (FHWA).

The adopted General Plan for the City does not define a build-out year for the General Plan land uses and, in order to develop the proportional growth between existing condition and General Plan Build-out condition, a General Plan Build-out year was estimated for the traffic impact analysis. This study uses the Southern California Associated Governments (SCAG) Regional Transportation Plan (RTP 2008) to estimate a projected compounded average annual growth rate between the RTP base year (2003) and the future year (2035) data for the Banning region for the purposes of estimating a potential Banning General Plan build-out horizon year. The SCAG compounded average annual households growth rate of 2.57 percent between 2003 and 2035 was calculated using projected growth within SCAG zones that cover the City limits, the sphere of influence, and planning areas.

The rate of household growth as calculated using the adjusted 2035 SCAG RTP TAZ projections was then compared to Banning General Plan Build-out projections and are shown in Table E2 in Appendix E.

According to the City General Plan Circulation Element, the City considers Level of Service (LOS) C as the upper limit of satisfactory operations except for intersections along Ramsey Street, where LOS D is considered satisfactory. Mitigation is required for any intersection where project traffic causes the intersection to deteriorate from satisfactory to unsatisfactory operation. The City does not have an adopted criterion that defines significant impact at an already existing deficient intersection; therefore, a conservative criterion was developed to address this potential condition. If an intersection is already operating at an unsatisfactory LOS, any increase in delay due to the addition of one or more cars would constitute a significant project impact. This criterion was applied to study intersections in all the jurisdictions. Thus, all study area intersections were mitigated to pre-project conditions.

Traffic conditions were analyzed at 49 intersections and 22 directional (eastbound or westbound) freeway segments in the vicinity of the project for a.m. and p.m. peak hour under the following conditions:

- Existing (Baseline) conditions;

- Existing (Baseline) plus project (Phase III) conditions;
- Year 2022 without project conditions;
- Year 2022 plus project (Phase I) conditions;
- Year 2032 without project conditions;
- Year 2032 plus project (Phases I & II) conditions;
- Year 2042 without project conditions;
- Year 2042 plus project (Phase III) conditions;
- General Plan build-out without project conditions; and
- General Plan build-out plus project conditions.

The existing plus project is considered to be a direct project impact and the intersections that operate at unacceptable LOS in the years 2022, 2032, 2042, and General Plan build-out plus project conditions are considered to be cumulative impacts. Mitigation measures are proposed in the study for all plus project conditions based on the LOS criteria discussed in this report.

1. The table below summarizes the project trip generation.

	Completion Year	ADT	A.M. Peak Hour	P.M. Peak Hour
Phase I	2022	34,049	2,427	3,087
Phase I and II	2032	48,156	3,527	4,542
Phase III	2042	62,263	4,626	5,998

2. The table below shows the key results of the analysis (number of locations that exceed LOS standards) and identifies the tables in this TIA that details them.

Scenario	LOS Tables		Number of locations exceeding LOS standards	
	Intersections	Freeway Segments	Intersections	Freeway Segments
Existing	Table F	Table G	5	0
Existing with complete project			25	0
Year 2022	Table P	Table Q	25	5
Year 2022 plus project (Phase I)			34	5
Year 2032	Table R	Table S	37	10
Year 2032 plus project (Phases I & II)			44	14
Year 2042	Table T	Table U	42	18
Year 2042 with complete project (Phase III)			48	20

Scenario	LOS Tables		Number of locations exceeding LOS standards	
	Intersections	Freeway Segments	Intersections	Freeway Segments
General Plan Build-out	Table V	Table W	43	21
General Plan Build-out plus project			48	21

- Figure ES-1 shows the study intersections that are affected by the project and which would need mitigation to meet LOS standards. It needs to be noted that for all the analysis scenarios (with the exception of the General Plan Build-out scenario), study area intersections have been mitigated to pre-project conditions.
- Table ES-A summarizes the recommended mitigation measures in the existing plus project (Phase III) and General Plan Build-out plus project scenarios for intersections shared by the City of Beaumont and the City of Banning. The table also lists the funding sources for the recommended improvements in both scenarios. Similarly, Table ES-B summarizes the recommended mitigation measures in the existing plus project (Phase III) and General Plan Build-out plus project scenarios for intersections exclusively in the City of Banning. The table also lists the funding sources for the recommended improvements in both scenarios for intersections exclusively in the City of Banning. Figure 29 (q.v.) illustrates the existing plus intersection geometrics resulting from these mitigations. Figure 33 illustrates the General Plan Build-out intersection geometrics resulting from these mitigations.
- The recommended freeway mitigations under Years 2022, 2032, and 2042, and General Plan Build-out Year are listed in the freeway mitigation section. Table G (q.v.) shows the levels of service for study area freeway segments for Existing plus project (Phase III) conditions. Tables AC, AD, AE, and AF (q.v.) show the LOS for study area freeway segments for Years 2022, 2032, and 2042, and General Plan Build-out, respectively, plus project (Phase I, II, and Phase III) conditions with mitigations.
- Table AH (q.v.) summarizes the contribution of project increment traffic to total new traffic at study intersections for all study area intersections under General Plan build-out plus project condition. Table AI (q.v.) summarizes the contribution of project increment traffic to total new freeway traffic for all study area freeway segments under General Plan build-out plus project condition.

1.0 INTRODUCTION AND SUMMARY

1.1 Purpose of Report and Study Objectives

This traffic impact analysis has been prepared to assess the potential circulation impacts associated with the proposed Pardee Homes Butterfield Specific Plan in the City of Banning (City). The proposed project consists of approximately 1,543 acres, which will include residential uses, a golf course, parks, open space, school sites, and commercial uses. The Butterfield Specific Plan is an amendment of the previously adopted Deutsch Specific Plan (1993) on the same site in the City. The Butterfield Specific Plan proposes a use intensity that is comparable to the 1993 Specific Plan. The City's January 2006 General Plan includes this intensity of use on the subject site.

This report has been prepared consistent with Riverside County guidelines for a traffic impact study and analyzes the following ten scenarios to satisfy the requirements for the disclosure of potential impacts and mitigation measures per the California Environmental Quality Act (CEQA).

- Existing (Baseline) Conditions;
- Existing (Baseline) plus project (Phase III) Conditions;
- Year 2022 without project Conditions;
- Year 2022 plus project (Phase I) Conditions;
- Year 2032 without project Conditions;
- Year 2032 plus project (Phases I & II) Conditions;
- Year 2042 without project Conditions;
- Year 2042 plus project (Phase III) Conditions;
- General Plan Build-out without project Conditions; and
- General Plan Build-out plus project Conditions.

Due to the size of the project (approximately 1,543 acres of development) and for the purposes of analyzing traffic impacts, the Butterfield Specific Plan is assumed to be built in three phases and will have development alternatives for some Planning Areas. Table A summarizes the different land uses by Planning Areas for the proposed Specific Plan.

Prior to preparing this traffic impact analysis, a scoping agreement for the TIA was developed and submitted to the City. This scoping agreement was reviewed and approved by the City. Based on market conditions and current absorption rates, year 2042 has been identified as the project build-out year, which was included in the scoping agreement. The initial project uses are not expected to generate traffic until 2012 and the project builds out over a 30-year period from 2012 to 2042. It should also be noted that the Highland Home Road/Interstate 10 (I-10) interchange is not a funded project and has not been assumed to be in place (constructed) and operational by 2042 or by the General Plan Build-out conditions. Hence, all the scenarios have been analyzed without assuming the extension of Highland Home Road south of Ramsey Street, to connect to I-10 or over the freeway to connect to Sun Lakes Boulevard. The objectives of the study presented in this report are as follows:

Pardee Homes "Butterfield" Specific Plan, Banning
Table A : Land Use Summary by Planning Areas

Planning Areas	Land Use	Gross Acres		Dwelling Units		Density (DU/AC)
RESIDENTIAL:						
1A	LDR	21.2		91		4.3
1B	MDR (Model Site)	2.8		10		3.6
1C	MDR	2.7		13		4.8

- Evaluate and document existing (Baseline) traffic conditions in the vicinity of the proposed project with and without the project;
- Evaluate year 2022 without project traffic conditions;
- Evaluate year 2022 plus project (Phase I) traffic conditions;
- Evaluate year 2032 without project conditions;
- Evaluate year 2032 plus project (Phases I & II) conditions;
- Evaluate year 2042 without project conditions;
- Evaluate year 2042 plus project (Phase III) conditions;
- Evaluate General Plan Build-out without project conditions;
- Evaluate General Plan Build-Out plus project conditions;
- Determine the project-related traffic impacts for each scenario;
- Identify circulation improvements needed to mitigate significant impacts at study intersections for Year 2022 (Phase I), Year 2032 (Phase I & II), Year 2042 (Phase III), and General Plan Build-out conditions plus project;
- Analyze on-site circulation and access of the proposed internal circulation system based on the current site plan; and
- Evaluate study area freeway segments for existing, years 2022, 2032, 2042, and General Plan Build-out traffic conditions and identify lane improvements required to maintain Riverside County Congestion Management Plan (CMP) freeway segments Level of Service (LOS) standard for each of the scenarios.

This study analyzes weekday a.m. and p.m. peak hour conditions. The a.m. peak hour is defined as the one hour of highest traffic volumes occurring between 7:00 and 9:00 a.m. The p.m. peak hour is the one hour of highest traffic volumes occurring between 4:00 and 6:00 p.m.

1.2 Site Location

The proposed Butterfield Specific Plan is located on a site generally bounded by Wilson Street to the south, Highland Springs Road to the west, Riverside County unincorporated land to the north and northeast, and portions of Highland Home Road to the east. Figure 1 illustrates the project location.

1.3 Development Description

The proposed Butterfield Specific Plan is located in the northwest corner of the City and will include approximately 1,543 acres. Approximately 1,522 acres are currently within the Banning City limits. The remaining approximately 21 acres proposed to be added to the Specific Plan are located in the northwest corner of the project area on the east side of Highland Springs Avenue and the south side of a proposed easterly extension of Brookside Avenue in an unincorporated area of the County.

FIGURE 1

Butterfield Specific Plan
Traffic Impact Analysis

Regional and Project Location

For the purpose of traffic impact analysis, the project is divided into in three phases with Phase I consisting of 1,796 residential units (1,394 single-family and 402 condominiums), 549 thousand square feet (TSF) of commercial uses (35% Floor Area Ratio), a golf course, and two elementary schools, to be completed by year 2022, Phase II consists of an additional 1,796 residential units for a total of 3,592 units to be completed by year 2032, and the final phase consists of an additional 1,795 residential units for a total of 5,387 units to be completed by year 2042. Upon completion by year 2042, the project will have up to 5,387 residential units, a golf course, commercial areas, two elementary schools, parks, and several open spaces. Figure 2 illustrates a conceptual land use plan for the project.

The proposed Specific Plan anticipates a maximum of 5,387 dwelling units in the designated residential planning areas. Planning Areas 17 and 18 (approximately 549 TSF) are designated for commercial uses. Planning Areas 20 and 68 (approximately 23 acres) are designated for elementary schools. Previously referenced Table A summarizes the project land uses by Planning Area. Table B provides an overall Land Use Summary for the proposed project.

The proposed Specific Plan will have eight access (entry/exit) locations that connect the internal streets, North Loop Collector and South Loop Collector, to Highland Springs Avenue, Wilson Street, and Highland Home Road. Three of the project entry/exit roads take access from Highland Springs Avenue, a project access road is provided along Wilson Street, and four project access roads would take access from the proposed extension of Highland Home Road. Highland Home Road will be extended northward and turn westward to connect with Highland Springs Avenue in alignment with Brookside Avenue. This alignment is consistent with the City of Banning General Plan Circulation Element. (See further description under “Future Conditions” section.) Figure 2 illustrates the project access roads.

2.0 STUDY AREA CONDITIONS

2.1 Existing Roadway System

Figure 3 identifies the existing roadway conditions for study area roadways. The number of mid-block traffic lanes for existing roadways and the existing intersection controls are identified.

2.2 Study Area

Riverside County traffic study guidelines require analysis of all intersections of General Plan roadways to which the project will contribute 50 or more peak hour trips not exceeding a 5-mile radius from the project site. Based on the project trip generation and distribution (described below in the “Projected Future Traffic” section), the study area includes the following 49 intersections:

1. I-10 Eastbound Ramps/San Timoteo Canyon Drive [Caltrans];
2. I-10 Westbound Ramps/Oak Valley Parkway [Caltrans];
3. Elm Avenue/Oak Valley Parkway-14th Street [City of Beaumont];
4. Beaumont Avenue/Oak Valley Parkway-14th Street [City of Beaumont];
5. Beaumont Avenue/8th Street [City of Beaumont];

6. Beaumont Avenue/I-10 Westbound Ramps [Caltrans];
7. Beaumont Avenue/I-10 Eastbound Ramps [Caltrans];
8. Beaumont Avenue/1st Street [City of Beaumont];
9. Beaumont Avenue/Westward Avenue [City of Beaumont];
10. Lamb Canyon Road/California Avenue [Riverside County];
11. Palm Avenue/Oak Valley Parkway-14th Street [City of Beaumont];
12. Palm Avenue/8th Street [City of Beaumont];
13. Pennsylvania Avenue/Oak Valley Parkway-14th Street [City of Beaumont];
14. Pennsylvania Avenue/8th Street [City of Beaumont];
15. Pennsylvania Avenue/I-10 Westbound Ramps [Caltrans];
16. Pennsylvania Avenue/I-10 Eastbound Ramps [Caltrans];
17. Pennsylvania Avenue/3rd Street [City of Beaumont];
18. Cherry Avenue/Oak Valley Parkway-14th Street [City of Beaumont];
19. Starlight Avenue/Oak Valley Parkway-14th Street [City of Beaumont];
20. Highland Springs Avenue/Brookside Avenue [Riverside County];
21. Highland Springs Avenue/16th Street-Cougar Way [City of Beaumont/City of Banning];
22. Highland Springs Avenue/F Street [City of Beaumont/City of Banning];
23. Highland Springs Avenue/Oak Valley Parkway-14th Street-B Street [City of Beaumont/City of Banning];
24. Highland Springs Avenue/Starlight Avenue-A Street [City of Beaumont/City of Banning];
25. Highland Springs Avenue/8th Street-Wilson Street [City of Beaumont/City of Banning];
26. Highland Springs Avenue/6th Street-Ramsey Street [City of Beaumont/City of Banning];
27. Highland Springs Avenue/I-10 Westbound Ramps [Caltrans];
28. Highland Springs Avenue/I-10 Eastbound Ramps [Caltrans];
29. Highland Springs Avenue/1st Street-Sun Lakes Boulevard [City of Beaumont/City of Banning];
30. Highland Springs Avenue/Potrero Boulevard [City of Beaumont/City of Banning];
31. C Street-Apex Avenue/Wilson Street [City of Banning];
32. Highland Home Road/Northern Loop [City of Banning];
33. Highland Home Road/Beaumont Avenue-G Street [City of Banning];
34. Highland Home Road/F Street [City of Banning];
35. Highland Home Road/D Street [City of Banning];
36. Highland Home Road/Wilson Street [City of Banning];

37. Highland Home Road/Ramsey Street [City of Banning];
38. Sunset Avenue/Wilson Street [City of Banning];
39. Sunset Avenue/Ramsey Street [City of Banning];
40. Sunset Avenue/I-10 Westbound Ramps [Caltrans];
41. Sunset Avenue/I-10 Eastbound Ramps [Caltrans];
42. Sunrise Avenue/Wilson Street [City of Banning];
43. 16th Street/Wilson Street [City of Banning];
44. 8th Street/Wilson Street [City of Banning];
45. 8th Street/Ramsey Street [City of Banning];
46. 8th Street/I-10 Westbound Ramps [Caltrans];
47. 8th Street/I-10 Eastbound Ramps [Caltrans];
48. 4th Street/Wilson Street [City of Banning]; and
49. San Gorgonio Avenue/Wilson Street [City of Banning].

Figure 4 shows the locations of the study intersections.

Study area freeway segments have been identified based on 50 or more peak hour trips on freeway segments, not exceeding a 5-mile radius from the project site guidelines. Following are the 10 segments on I-10 and one segment on State Route 60 (SR-60) that meet these criteria:

- Segments on Interstate 10:
 - o Cherry Valley Boulevard to Oak Valley Parkway;
 - o Oak Valley Parkway to SR-60;
 - o SR-60 to Beaumont Avenue;
 - o Beaumont Avenue to Pennsylvania Avenue;
 - o Pennsylvania Avenue to Highland Springs Avenue;
 - o Highland Springs Avenue to Sunset Avenue;
 - o Sunset Avenue to 22nd Street;
 - o 22nd Street to 8th Street;
 - o 8th Street to Hargrave Street; and
 - o Hargrave Street to Ramsey Street.
- Segment on State Route 60:
 - o Jack Rabbit Trail to I-10.

- PROJECT BOUNDARY
- STUDY AREA INTERSECTIONS

The intersection of Highland Springs Avenue/5th Street [City of Banning] was included in the LOS analysis network but not included as a study area intersection. The interchange at Beaumont Avenue is expected to be redesigned by year 2032. The Pennsylvania Avenue interchange presently exists as a half-diamond interchange. It is expected to be upgraded to a full interchange by year 2032. The I-10/Oak Valley Parkway interchange is also expected to be redesigned prior to year 2032. The City of Beaumont with the approval of the City of Banning is preparing a project study report (PSR) on the I-10/Highland Springs Avenue interchange, which could result in an ultimate redesign of the intersection prior to year 2032.

2.3 Intersection Levels of Service: Definition and Criteria

Roadway operations and the relationship between capacity and traffic volumes are generally expressed in terms of levels of service, or LOS, which are defined using the letter grades A through F. These levels recognize that, while an absolute limit exists as to the amount of traffic traveling through a given intersection (the absolute capacity), the conditions that motorists experience rapidly deteriorate as traffic approaches the absolute capacity. Under such conditions, congestion is experienced. There is general instability in the traffic flow, which means that relatively small incidents (e.g., momentary engine stall) can cause considerable fluctuations in speeds and delays. This near-capacity situation is labeled LOS E. Beyond LOS E, capacity has been exceeded, and arriving traffic will exceed the ability of the intersection to accommodate it. An upstream queue will then form and continue to expand in length until the demand volume again declines.

A complete description of the meaning of level of service can be found in the Transportation Research Board Special Report 209, *Highway Capacity Manual*. The Manual establishes levels of service A through F. Table C shows brief descriptions of the six levels of service, as abstracted from the Manual.

Table C: Level of Service Definitions

LOS	Description
A	No approach phase is fully utilized by traffic and no vehicle waits longer than one red indication. Typically, the approach appears quite open, turns are made easily, and nearly all drivers find freedom of operation.
B	This service level represents stable operation, where an occasional approach phase is fully utilized and a substantial number are approaching full use. Many drivers begin to feel restricted within platoons of vehicles.
C	This level still represents stable operating conditions. Occasionally, drivers may have to wait through more than one red signal indication, and backups may develop behind turning vehicles. Most drivers feel somewhat restricted but not objectionably so.
D	This level encompasses a zone of increasing restriction approaching instability at the intersection. Delays to approaching vehicles may be substantial during short peaks within the peak period; however, enough cycles with lower demand occur to permit periodic clearance of developing queues, thus preventing excessive backups.
E	Capacity occurs at the upper end of this service level. It represents the most vehicles that any particular intersection approach can accommodate. Full utilization of every signal cycle is seldom attained no matter how great the demand.

Table C: Level of Service Definitions

LOS	Description
F	This level describes forced flow operations at low speeds, where volumes exceed capacity. These conditions usually result from queues of vehicles backing up from a restriction downstream. Speeds are reduced substantially and stoppages may occur for short or long periods of time due to the congestion. In the extreme case, both speed and volume can drop to zero.

Table D shows the level of service criteria for unsignalized and signalized intersections.

Table D: Level of Service Criteria for Unsignalized and Signalized Intersections

Level of Service	Unsignalized Intersection Average Delay per Vehicle (sec.)	Signalized Intersection Average Delay per Vehicle (sec.)
A	≤ 10	≤ 10
B	> 10 and ≤ 15	> 10 and ≤ 20
C	> 15 and ≤ 25	> 20 and ≤ 35
D	> 25 and ≤ 35	> 35 and ≤ 55
E	> 35 and ≤ 50	> 55 and ≤ 80
F	> 50	> 80

Consistent with Riverside County guidelines, all study area intersections were analyzed using the 2000 *Highway Capacity Manual* (HCM 2000) analysis methodologies. Levels of service at all intersections were calculated using Traffix 7.8 and Synchro 7 software.

LOS Standard. The project study area spans three jurisdictions: City of Banning, City of Beaumont, and the County of Riverside (County). In addition, Caltrans has jurisdiction over State highways and freeway ramp terminus intersections. Caltrans endeavors to maintain an LOS between C and D at all intersections under its jurisdiction. Therefore, a maximum average delay of 45 seconds per vehicle is considered at Caltrans facilities. The City of Beaumont uses LOS D as the threshold of acceptability during peak hours. The County of Riverside uses LOS D as the threshold of acceptability in community development areas and LOS C in all other areas.

According to the City of Banning General Plan Circulation Element, the City considers LOS C as the upper limit of satisfactory operations except for intersections along Ramsey Street, where LOS D is considered satisfactory. Mitigation is required for any intersection where project traffic causes the intersection to deteriorate from satisfactory to unsatisfactory operation. The City does not have an adopted criterion that defines significant impact at an already existing deficient intersection; therefore, a conservative criterion was developed to address this potential condition. If an intersection is already operating at an unsatisfactory LOS, any increase in delay due to the addition of one or more cars would constitute a significant project impact. This criterion was applied to study intersections in all the jurisdictions.

If an intersection in the City of Banning is operating at a satisfactory LOS under without project condition and the addition of project traffic deteriorates the LOS of the intersection from satisfactory to unsatisfactory, improvements were proposed to mitigate the project impact to both LOS C and LOS D. It needs to be noted that Highland Springs Avenue defines the western City boundary and

jurisdictions of intersections on Highland Springs Avenue are shared by both City of Banning and City of Beaumont/Riverside County. Following are the study area intersections within the City of Banning that are being evaluated both for LOS C and LOS D standards:

- Highland Springs Avenue/16th Street-Cougar Way [City of Banning];
- Highland Springs Avenue/F Street [City of Banning];
- Highland Springs Avenue/Oak Valley Parkway-14th Street-B Street [City of Banning];
- Highland Springs Avenue/Starlight Avenue-A Street [City of Banning];
- Highland Springs Avenue/8th Street-Wilson Street [City of Banning];
- Highland Springs Avenue/1st Street-Sun Lakes Boulevard [City of Banning];
- Highland Springs Avenue/Potrero Boulevard [City of Banning];
- C Street-Apex Avenue/Wilson Street [City of Banning];
- Highland Home Road/Northern Loop [City of Banning];
- Highland Home Road/Beaumont Road-G Street [City of Banning];
- Highland Home Road/F Street [City of Banning];
- Highland Home Road/D Street [City of Banning];
- Highland Home Road/Wilson Street [City of Banning];
- Sunset Avenue/Wilson Street [City of Banning];
- Sunrise Avenue/Wilson Street [City of Banning];
- 16th Street/Wilson Street [City of Banning];
- 8th Street/Wilson Street [City of Banning];
- 4th Street/Wilson Street [City of Banning]; and
- San Gorgonio Avenue/Wilson Street [City of Banning].

The Riverside County CMP has a standard of LOS E or better for freeway segments. Thus, freeway segments must be mitigated to LOS E or better.

3.0 EXISTING CONDITIONS

3.1 Existing Traffic Controls and Intersection Geometrics

Existing intersection geometrics and control are illustrated in Figure 5.

3.2 Existing Traffic Volumes

Traffic counts were conducted by NDS, Inc. in May 2010. Count sheets are contained in Appendix A. Existing a.m. and p.m. peak hour intersection traffic volumes are shown in Figures 6A and 6B.

FIGURE 6B

LSA

XXX PM Peak Hour Volume

Butterfield Specific Plan
Traffic Impact Analysis
Existing P.M. Peak Hour Traffic Volumes

Existing Annual Average Daily Traffic (AADT) volume data published by Caltrans in 2008 were used to develop the peak hour volumes for freeway segments. Total volumes on study area segments were divided into passenger vehicles and truck volumes based on the truck percentages available from the Caltrans 2008 AADT truck counts for each segment. Consistent with *Highway Capacity Manual* methodologies, passenger car equivalent (PCE) volumes for the freeway segments were computed using a PCE factor of 1.5 for all trucks, as the impact of trucks on freeway operations is lower than the impact at intersection operations. The peak hour segment volumes for the freeway segments were calculated by applying percentages to AADT in peak hour in each of these segments. The directional split of traffic volumes on each segment was computed using the Caltrans split of peak hour traffic in peak direction for these segments.

It should be noted that the traffic counts on the freeways were conducted in 2008 by Caltrans. These are the most recent and best available traffic data for freeway segments. In order to analyze the existing conditions (2010), the 2008 count data were adjusted by adding growth for a period of two years to develop the 2010 traffic volume along the study area freeway segments. Table E shows the existing a.m. and p.m. peak hour segment volumes on the study area freeway segments. Detailed volume development sheets for study intersections and freeway segments are included in Appendix B.

3.3 Existing (Baseline) Conditions Levels of Service

An LOS analysis was conducted to evaluate existing a.m. and p.m. peak hour traffic operations at the study area intersections. Table F summarizes the results of this analysis. LOS worksheets are included in Appendix C. As shown in Table F, the following five intersections exceed LOS thresholds:

- I-10 Eastbound Ramps/San Timoteo Canyon Drive [Caltrans] (a.m. and p.m. peak hours);
- Pennsylvania Avenue/I-10 Westbound Ramp [Caltrans] (p.m. peak hour);
- Highland Springs Avenue/6th Street-Ramsey Street [City of Banning] (p.m. peak hour);
- Highland Springs Avenue/I-10 Westbound Ramps [Caltrans]; and
- 8th Street/I-10 Eastbound Ramps [Caltrans] (a.m. and p.m. peak hours).

Table G summarizes the existing a.m. and p.m. peak hour freeway mainline traffic volumes and levels of service for the freeway segments on I-10 and SR-60. As shown in Table G, all freeway segments are currently operating at LOS E or better during the a.m. and p.m. peak hours in both directions.

3.4 Project Traffic

Trip Generation. Trip generation for the proposed project was calculated using rates for Land Use 210 ("Single Family Detached Housing"), Land Use 230 ("Residential Condominium/Townhomes"), Land Use 820 ("Shopping Center"), Land Use 430 ("Golf Course"), and Land Use 520 ("Elementary School"), from the Institute of Transportation Engineers (ITE) *Trip Generation*, 8th Edition. Retail establishments typically draw some trips from traffic passing the site on an adjacent street. These trips are not "new" trips and were already occurring on the adjacent street system prior to the development of the commercial site but enter the commercial site en route to some other destination. These trips are referred to as "pass-by" trips and only affect traffic at the project driveways. Pass-by trips were

Exceeds LOS standard.

Notes:

V/C = Volume/Capacity Ratio

LOS = Level of Service

TWSC = Two-Way Stop Control

AWSC=All-Way Stop Control

For TWSC intersections, reported delay is for worst-case approach.

* Exceeds level of service standard

¹ Peak Hour Factor. PHF volume assumes a PHF of 0.98.

Note:

According to the CMP, the capacity of a mixed-flow lane is 2,300 vehicles per hour, and the capacity of an HOV lane is 1,600 vehicles per hour.

adjusted from the total gross trips by taking pass-by trip percentages for the proposed commercial land uses from the ITE *Trip Generation Handbook* (2004) for Land Use 820 (“Shopping Center”). As is typical of most mixed-use projects, a percentage of trips generated by the project will be trips entirely within the project itself, such as a trip from a retail store to a residence within the project or a trip from home (residence) to school with the project. These trips are referred to as “internal trips” and do not affect the surrounding street traffic or even the project driveways. Internal trips were calculated using the project select zone model plots obtained from the Pass Area Model (PAM; used for City of Banning General Plan Update, June 2005).

Table H summarizes the trip generation by phase for the project during the a.m. and p.m. peak hours. Appendix D shows detailed Trip Generation by Planning Area. As shown in Table H, Phase I (Year 2022) is expected to generate 2,427 trips during the a.m. peak hour, 3,087 trips during the p.m. peak hour, and 34,049 daily trips. Phases I and II (Year 2032) are expected to generate 3,527 trips during the a.m. peak hour, 4,542 trips during the p.m. peak hour, and 48,156 daily trips. Phase III (Year 2042) is expected to generate 4,626 trips during the a.m. peak hour, 5,998 trips during the p.m. peak hour, and 62,263 daily trips.

Trip Distribution and Assignment. Project trip distribution patterns were developed using the PAM’s (used for City of Banning General Plan Update, June 2005) select zone trip assignment. Since the PAM considers the General Plan Build-out roadway network configuration, trip distribution patterns for existing plus project and year 2022 plus project scenarios were adjusted based on the existing roadway network configuration.

Figure 7 illustrates the trip distribution pattern for Existing and Year 2022 scenarios. Figure 8 illustrates the trip distribution pattern for Year 2032, Year 2042, and General Plan Build-Out scenarios. Figures 9A and 9B illustrate the a.m. and p.m. peak hour project trips for existing plus project conditions at the study area intersections. Figures 10A and 10B illustrate the a.m. and p.m. peak hour project trips for Year 2022 Phase I completion at the study area intersections. Figures 11A and 11B illustrate the a.m. and p.m. peak hour project trips for Year 2032 Phases I and II completion at the study area intersections. Figures 12A and 12B illustrate the a.m. and p.m. peak hour project trips for Year 2042 Phase III and General Plan Build-out year conditions at the study area intersections.

Project Trips on Freeway Segments. Project volumes on study area freeway segments were developed by applying the project trip distribution patterns at study area interchanges to the project. Tables I, J, and K illustrate the overall trip assignment on freeway segments for project trips under year 2022, year 2032, and year 2042/2045, respectively.

3.5 Existing (Baseline) Plus Project Conditions

Existing plus project conditions traffic volumes were developed by adding project trips to existing (Baseline) conditions traffic volumes. Figure 13A illustrates the existing plus project a.m. peak hour traffic volumes and Figure 13B illustrates the existing plus project p.m. peak hour traffic volumes at each of the study area intersections.

Existing Plus Project P.M. Peak Hour Traffic Volumes

Existing (Baseline) Plus Project Intersection Levels of Service. A level of service analysis was conducted to evaluate existing (baseline) plus project a.m. and p.m. peak hour traffic operations at the study area intersections. Previously referenced Table F summarizes the results of this analysis. Level of service worksheets are included in Appendix C. As shown in Table F, 25 intersections exceed LOS thresholds.

Existing (Baseline) Plus Project Freeway Segment Levels of Service. Previously referenced Table G summarizes existing plus project (Phase III) a.m. and p.m. peak hour freeway mainline traffic volumes and levels of service for the freeway segments on I-10 and SR-60. As shown in Table G, two freeway segments are projected to operate at unsatisfactory levels of service.

4.0 FUTURE CONDITIONS

The future conditions (Years 2022, 2032, and 2042 and General Plan Build-out) at all study area intersections were analyzed based on existing intersection configurations. The traffic volumes for the future conditions were developed based on the City of Banning General Plan traffic model that include the General Plan land use data and a proposed circulation system consistent with the City of Beaumont General Plan Circulation Element (Revised December 2004) and the Pass Area Circulation Plan, which is part of the Riverside County Integrated Project (RCIP).

4.1 Year 2022 Conditions

The traffic volumes for interim year 2022 (Phase I) were estimated by calculating growth between existing (baseline) and General Plan Build-Out (2045) (see the General Plan Build-Out section for further discussion of General Plan Build-out year) traffic volumes at the study intersections. The growth between existing and General Plan Build-Out (2045) was assumed to be evenly distributed. The General Plan Build-Out (2045) traffic volumes obtained from the PAM have been adjusted (reduced) proportionately from General Plan Build-out year 2045 to year 2022 (Phase I). These volumes have been used for level of service analysis for the year 2022 conditions. Detailed volume development worksheets are included in Appendix B.

Roadway Network. Year 2022 plus project (Phase I) intersection geometrics and control are illustrated in Figure 14.

Year 2022 Without Project Traffic Volumes. Figure 15A illustrates the year 2022 without project a.m. peak hour traffic volumes and Figure 15B illustrates the year 2022 without project p.m. peak hour traffic volumes at each of the study area intersections.

Year 2022 Plus Project (Phase I) Traffic Volumes. Year 2022 plus project (Phase I) traffic volumes were developed by adding the Phase I project traffic to the year 2022 without project traffic volumes. Figure 16A illustrates the year 2022 plus project (Phase I) a.m. peak hour traffic volumes and Figure 16B illustrates the year 2022 plus project (Phase I) p.m. peak hour traffic volumes at each of the study intersections.

XXX PM Peak Hour Volume

Butterfield Specific Plan
Traffic Impact Analysis
Year 2022 Plus Project (Phase I) P.M. Peak Hour Traffic Volumes

Year 2022 Freeway Segment Traffic Volumes. The following describes in detail the methodology employed for PCE vehicles to determine the a.m. and p.m. peak hour freeway segment traffic volumes for year 2022 without project conditions:

1. The difference between 2008 (latest counts available from Caltrans) and General Plan Build-out year (2045) without project peak hour freeway segment volumes was identified. This difference defines the growth in traffic over the 37-year period. For this purpose, General Plan Build-out year (2045) without project freeway segment volumes were adjusted to reflect the 2008 conditions.
2. The incremental growth in freeway segment volumes between 2008 and 2045 was factored to reflect the forecast growth between (2008) and 2022. For this purpose, linear growth between the 2008 base condition and the forecast 2045 condition was assumed. Since the increment between 2008 and 2022 is 14 years of the 37-year time span, a factor of 0.38 (i.e., 14/37) was used.
3. The forecast growth in freeway segment volumes was added to the 2008 freeway segment volumes, resulting in post-processed forecast year 2022 without project a.m. and p.m. peak hour freeway segment volumes.
4. Project traffic was added to the year 2022 without project a.m. and p.m. peak hour freeway segment volumes to develop year 2022 plus project a.m. and p.m. peak hour freeway segment volumes.

Table L shows the Year 2022 peak hour segment volumes on the study area freeway segments. Detailed volume development worksheets are included in Appendix B.

4.2 Year 2032 Conditions

The traffic volumes for interim year 2032 (Phase I and Phase II) were estimated by calculating growth between existing (Baseline) and General Plan Build-out (2045) traffic volumes at the study intersections. The growth between existing and General Plan Build-out (2045) has been assumed to be evenly distributed. The General Plan Build-out (2045) traffic volumes obtained from the PAM have been adjusted (reduced) proportionately from General Plan Build-out year 2045 to year 2032 (Phase I and Phase II). These volumes have been used for level of service analysis for the year 2032 conditions. Detailed volume development worksheets are included in Appendix B.

Roadway Network. Year 2032, plus project geometrics and intersection control are illustrated in Figure 17.

Year 2032 Without Project Traffic Volumes. Figure 18A illustrates the year 2032 without project a.m. peak hour traffic volumes and Figure 18B illustrates the year 2032 without project p.m. peak hour traffic volumes at each of the study area intersections.

Year 2032 Plus Project (Phases I and II) Traffic Volumes. Year 2032 plus project (Phases I and II) traffic volumes were developed by adding the Phases I and II project traffic to the year 2032 without

project traffic volumes. Figure 19A illustrates the year 2032 plus project (Phases I and II) a.m. peak hour traffic volumes and Figure 19B illustrates the year 2032 plus project (Phases I and II) p.m. peak hour traffic volumes at each of the study intersections.

Year 2032 Freeway Segment Traffic Volumes. Year 2032 a.m. and p.m. peak hour freeway segment volumes were developed using the same post-processing methodology described above in Year 2022 section in steps 1 through 4. Table M shows the Year 2032 peak hour segment volumes on the study area freeway segments. Detailed volume development worksheets are included in Appendix B.

4.3 Year 2042 Conditions

The traffic volumes for year 2042 (Phase III) were estimated by calculating growth between existing (Baseline) and General Plan Build-out (2045) traffic volumes at the study area intersections. The growth between existing and General Plan Build-out (2045) has been assumed to be evenly distributed. The General Plan Build-out (2045) traffic volumes obtained from the PAM have been adjusted (reduced) proportionately from General Plan Build-out year 2045 to year 2042 (Phase III). These volumes have been used for level of service analysis for the year 2042 conditions. Detailed volume development worksheets are included in Appendix B.

Roadway Network. Year 2042, plus project geometrics and intersection control are illustrated in previously referenced Figure 17.

Year 2042 Without Project Traffic Volumes. Figure 20A illustrates the year 2042 without project a.m. peak hour traffic volumes and Figure 20B illustrates the year 2042 without project p.m. peak hour traffic volumes at each of the study area intersections.

Year 2042 Plus Project (Phase III) Traffic Volumes. Year 2042 plus project (Phase III) traffic volumes were developed by adding the Phase III traffic to the year 2042 without project traffic volumes. Figure 21A illustrates the year 2042 plus project (Phase III) a.m. peak hour traffic volumes and Figure 21B illustrates the year 2042 plus project (Phase III) p.m. peak hour traffic volumes at each of the study intersections.

Year 2042 Freeway Segment Traffic Volumes. Year 2042 a.m. and p.m. peak hour freeway segment volumes were developed using the same post-processing methodology described above in steps 1 through 4. Table N shows the Year 2022 peak hour segment volumes on the study area freeway segments. Detailed volume development worksheets are included in Appendix B.

4.4 General Plan Build-Out Conditions

The future traffic forecast for the Circulation Element of the adopted Banning General Plan (updated June 2005) was developed based on the PAM, which is an intensified intensified/detailed version of the RCIP. The same traffic model was used to develop future traffic conditions for the project. PAM

is a Tranplan model, which includes a divided into street network and Traffic Analysis Zones (TAZs). Each TAZ contains land use information, and the traffic that the land use would generate. It is important to note that some land uses are producers of traffic, while others are attractors for traffic. For example, residential land uses produce traffic, while retail/commercial land uses attract traffic. Furthermore, the traffic generated by various TAZs is assigned to the street network. This traffic assignment depends on various characteristics of the street system, such as capacity, speed, distance, and street classification. The traffic traveling from the producer land use to the attractor land use generally follows the path of least resistance and is a function of travel time. In a dynamic traffic model, the traffic assigned is sensitive to the characteristics of the street system. For example, if a roadway segment is upgraded from four-lane arterial to a six-lane arterial (increase in capacity of the segment), the six-lane arterial will have less resistance to traffic flow (less travel time). Therefore, traffic from adjacent parallel roadways, which have higher resistance to traffic flow (higher travel time), is diverted to this upgraded roadway segment, thus lowering congestion along roadways in the region.

This phenomenon of dynamic traffic assignment diverts traffic from congested roadway segments to roadway segments that have reserve capacities to improve the traffic flow within the region. It should be noted that due to this dynamic assignment of traffic, if the traffic generated by a zone is reduced, the traffic along the roadway system adjacent to the zone will be reassigned such that the reserve capacity generated by the reduction in traffic from the zone will be replaced by traffic from other congested roadways in the region.

In order to maintain the dynamics of this assignment process, the intersection turning-movement volume for the build-out conditions were developed using the PAM a.m. and p.m. peak hour volumes. The trip generation rate of the proposed project used in the PAM is lower than the current trip generation rate of the proposed project. Project select zone trips obtained from the PAM were subtracted from the build-out conditions turning movement volumes to obtain build-out conditions without project model numbers. Also, some of the model turning movement volumes at study intersections had missing or lower turn volumes compared to existing turning movement volumes. The build-out volumes were adjusted by replacing missing or lower turn volumes at some of the study intersections to reflect existing turning movement volumes. These adjusted build-out turning movement volumes were used to calculate turning movement volumes for Year 2022, 2032, and 2042 without project volumes.

The City of Banning General Plan Circulation Element (updated January, 2006), the City of Beaumont General Plan Circulation Element (Revised December 2004), and the Pass Area Circulation Plan, propose a General Plan circulation system that includes the following improvements:

- The conversion of the I-10/Pennsylvania Avenue interchange to a complete interchange;
- Redesigning the I-10/Oak Valley Parkway interchange; and
- Redesigning of the I-10/Beaumont Avenue interchange.

The future traffic volumes were developed based on traffic circulation patterns for roadway network that included the above improvements for analyzing General Plan Build-out year conditions as well as Year 2032 and Year 2042 conditions. The reason these improvements are assumed to be in place by

2032 is because all these improvements are currently at same stage in the development process and are being funded under the Western Riverside Council of Governments (WRCOG) program. The I-10/Highland Home Road interchange is neither included in this program nor included in the 2008 SCAG RTP and hence is not assumed in the future network.

The City of Banning General Plan Circulation Element (Updated June 2005) included analyses of build-out conditions based on projected traffic volumes forecast using the PAM. This model was also used to forecast build-out traffic volumes for the City of Beaumont General Plan Circulation Element. The future traffic projections in the PAM for City of Banning General Plan Build-out conditions are based on a street network that proposes the northerly extension of Highland Home Road from Wilson Street to approximately 12th Street and then bends 90 degrees to the west and connect to Brookside Avenue rather than to Cherry Valley Boulevard. Also, it should be noted that connection of Highland Home Road to Brookside Avenue or to Cherry Valley Boulevard has very little effect on the circulation patterns in this region due to low traffic along Highland Home Road in the area around the confluence of Highland Springs Avenue, Highland Home Road, Brookside Avenue, and Cherry Valley Boulevard. Based on discussion in the traffic study for the City's General Plan, which states that "from a traffic perspective, there appears to be little advantage of one over the other" (page 47), it is clear that the connection of Highland Home Road to Brookside Avenue or Cherry Valley Boulevard does not have notable effect on traffic in the area. Hence, this study analyzes the future traffic/circulation impacts using the street network that has the northerly extension of Highland Home Road connected to Brookside Avenue instead of Cherry Valley Boulevard.

Figure 22 shows the City of Banning General Plan Circulation Element and Figure 23 shows the City of Banning arterial street cross-sections. Figure 24 shows the City of Beaumont General Plan Circulation Element and Figure 25 shows the City of Beaumont arterial street cross-sections. The RCIP Pass Area Plan Circulation Element is depicted in Figure 26.

Roadway Network. General Plan Build-out conditions plus project geometrics and stop control are illustrated in previously referenced Figure 17.

General Plan Build-out Without Project Condition Traffic Volumes. Figure 27A illustrates the General Plan Build-out a.m. peak hour without project traffic volumes and Figure 27B illustrates the General Plan Build-out p.m. peak hour without project traffic volumes at each of the study area intersections.

General Plan Build-out Plus Project Condition Traffic Volumes. General Plan Build-out year plus project traffic volumes were developed by adding the Phase III traffic to the General Plan Build-out year without project traffic volumes. Figure 28A illustrates the General Plan Build-out year plus project a.m. peak hour traffic volumes and Figure 28B illustrates the General Plan Build-out year plus project p.m. peak hour traffic volumes at each of the study intersections.

General Plan Build-out Condition Freeway Segment Traffic Volumes. General Plan Build-out without project a.m. and p.m. peak hour freeway segment volumes were developed by using the RCIP

PAM (City of Banning General Plan Update, June 2005). The model's select zone volumes were subtracted from the total freeway segment volumes to derive the General Plan Build-out without project a.m. and p.m. peak hour freeway segment volumes. Truck percentages contained in the Caltrans "2008 Annual Daily Truck Traffic on the California State Highway System Report" were used to determine the percentage of trucks at study area freeway segments. PCE volumes were computed by using a PCE factor by 1.5. General Plan Build-out plus project a.m. and p.m. peak hour freeway segment volumes were developed by adding project traffic to General Plan Build-out without project a.m. and p.m. peak hour freeway segment volumes. Table O shows the General Plan Build-out year without and plus project peak hour segment volumes on the study area freeway segments. Detailed volume development worksheets are included in Appendix B.

Determination of General Plan Build-Out Year. The current General Plan for the City of Banning does not identify a build-out year for the General Plan land uses and in order to develop the proportional growth between existing condition and General Plan Build-out condition, a General Plan Build-out year was estimated for the traffic impact analysis. The 2008 SCAG RTP was used to estimate a projected compounded average annual growth rate between the RTP base year (2003) and the RTP future year (2035) data for the Banning region for the purposes of estimating a potential Banning General Plan build-out horizon year. As shown in Table E1 in Appendix E, the SCAG compounded average annual households growth rate of 2.57 percent between 2003 and 2035 was calculated using projected growth within SCAG zones that cover the City limits, the sphere of influence, and planning areas. The SCAG Traffic Analysis Zones in the Banning region are attached in Appendix E.

The rate of household growth as calculated using the adjusted 2035 SCAG RTP TAZ projections was then compared to Banning General Plan Build-out projections. The SCAG growth rate (2.57%) was applied to residential build-out statistics shown in Table E2 (included in Appendix E) in the City's General Plan. The table shows that there are 10,404 existing (2003) dwelling units (du) within City boundaries, 352 existing du within the sphere of influence, and 204 existing du within the planning areas. Thus, the total existing residential units are 10,960 (10,404 + 352 + 204). Similarly, the total projected build-out units are 26,595 within the City boundaries, 2,982 within the sphere of influence, and 1,926 within the planning areas. Therefore, the total projected build-out residential units are 31,503. Applying the SCAG compounded average annual growth rate (2.57%) to these data [existing (10,960) and build-out (31,503)], the projected residential build-out year would be 2045 (2003 + 42).

5.0 TRAFFIC ANALYSIS

Level of service analysis was conducted for the study area intersections and freeway segments for all the analysis scenarios. The following sections report the results of those analyses.

5.1 Year 2022 Without Project Intersection Levels of Service

A level of service analysis was conducted to evaluate year 2022 without project a.m. and p.m. peak hour traffic operations at the study area intersections. Table P summarizes the results of this analysis. Level of service worksheets are included in Appendix C. As shown in Table P, 25 intersections exceed LOS thresholds.

* The interchange on Pennsylvania Avenue is expected to be upgraded to a full diamond interchange before General Plan build-out year.

[^] Model volumes are greater than in existing conditions. Therefore, a growth factor derived for the segment of 22nd Street to 8th Street was used to develop without project PCE volumes.

■ Exceeds LOS standard.

Notes:

V/C = Volume/Capacity Ratio

LOS = Level of Service

TWSC = Two-Way Stop Control

AWSC=All-Way Stop Control

For TWSC intersections, reported delay is for worst-case approach.

5.2 Year 2022 Without Project Freeway Segment Levels of Service

Table Q summarizes year 2022 without project a.m. and p.m. peak hour freeway mainline traffic volumes and levels of service for the freeway segments on I-10 and SR-60. As shown in Table Q, 5 freeway segments are projected to operate at unsatisfactory levels of service.

5.3 Year 2022 Plus Project (Phase I) Intersection Levels of Service

A level of service analysis was conducted to evaluate year 2022 plus project (Phase I) a.m. and p.m. peak hour traffic operations at the study area intersections. The results of this analysis are summarized in previously referenced Table P. Level of service worksheets are included in Appendix C. As shown in Table P, 34 intersections are affected by the project.

5.4 Year 2022 Plus Project (Phase I) Freeway Segment Levels of Service

Previously referenced Table Q summarizes year 2022 plus project a.m. and p.m. peak hour freeway mainline traffic volumes and levels of service for the freeway segments on I-10 and SR-60. As shown on Table Q, 5 freeway segments are projected to operate at unsatisfactory levels of service.

5.5 Year 2032 Without Project Intersection Levels of Service

A level of service analysis was conducted to evaluate year 2032 without project a.m. and p.m. peak hour traffic operations at the study area intersections. The results of this analysis are summarized in Table R. Level of service worksheets are included in Appendix C. As shown in Table R, 37 intersections exceed LOS thresholds.

5.6 Year 2032 Without Project Freeway Segments Levels of Service

Table S summarizes year 2032 without project a.m. and p.m. peak hour freeway mainline traffic volumes and levels of service for the freeway segments on I-10 and SR-60. As shown on Table S, 10 freeway segments are projected to operate at unsatisfactory levels of service.

5.7 Year 2032 Plus Project (Phases I and II) Intersection Levels of Service

A level of service analysis was conducted to evaluate year 2032 plus project (Phases I and II) a.m. and p.m. peak hour traffic operations at the study area intersections. The results of this analysis are summarized in Table R. Level of service worksheets are included in Appendix C. As shown in Table R, 44 intersections exceed LOS thresholds.

5.8 Year 2032 Plus Project (Phases I and II) Freeway Segments Levels of Service

Table S summarizes year 2032 plus project a.m. and p.m. peak hour freeway mainline traffic volumes and levels of service for the freeway segments on I-10 and SR-60. As shown on Table S, 14 freeway segments are projected to operate at unsatisfactory levels of service.

* Exceeds level of service standard

■ Exceeds level of service standard

¹ Peak Hour Factor. PHF volume assumes a PHF of 0.98.

Note:

According to the CMP, the capacity of a mixed-flow lane is 2,300 vehicles per hour, and the capacity of an HOV lane is 1,600 vehicles per hour.

 Exceeds LOS standard.

Notes:

V/C = Volume/Capacity Ratio

LOS = Level of Service

TWSC = Two-Way Stop Control

AWSC=All-Way Stop Control

For TWSC intersections, reported delay is for worst-case approach.

* Exceeds level of service standard

■ Exceeds level of service standard

¹ Peak Hour Factor. PHF volume assumes a PHF of 0.98.

Note:

According to the CMP, the capacity of a mixed-flow lane is 2,300 vehicles per hour, and the capacity of an HOV lane is 1,600 vehicles per hour.

5.9 Year 2042 Without Project Intersection Level of Service

A level of service analysis was conducted to evaluate year 2042 without project a.m. and p.m. peak hour traffic operations at the study area intersections. Table T summarizes the results of this analysis. Level of service worksheets are included in Appendix C. As shown in Table T, 42 intersections exceed LOS thresholds.

5.10 Year 2042 Without Project Freeway Segments Level of Service

Table U summarizes year 2042 without project a.m. and p.m. peak hour freeway mainline traffic volumes and levels of service for the freeway segments on I-10 and SR-60. As shown in Table U, 18 freeway segments are projected to operate at unsatisfactory levels of service.

5.11 Year 2042 Plus Project (Phase III) Intersection Level of Service

A level of service analysis was conducted to evaluate year 2042 plus project (Phase III) a.m. and p.m. peak hour traffic operations at the study area intersections. The results of this analysis are summarized in previously referenced Table T. Level of service worksheets are included in Appendix C. As shown in Table T, 48 intersections operate at unsatisfactory levels of service.

5.12 Year 2042 Plus Project (Phase III) Freeway Segments Level of Service

Table U summarizes year 2042 plus project a.m. and p.m. peak hour freeway mainline traffic volumes and levels of service for the freeway segments on I-10 and SR-60. As shown in Table U, 20 freeway segments are projected to operate at unsatisfactory levels of service.

5.13 General Plan Build-out Year Without Project Conditions Intersection Levels of Service

A level of service analysis was conducted to evaluate traffic operations at the study area intersections during the a.m. and p.m. peak hours under General Plan Build-out year without project conditions. Table V summarizes the results of the analysis. Level of service worksheets are included in Appendix C. As shown in Table V, 44 intersections exceed LOS thresholds.

5.14 General Plan Build-out Year Without Project Freeway Segments Level of Service

Table W summarizes General Plan Build-out year without project a.m. and p.m. peak hour freeway mainline traffic volumes and levels of service for the freeway segments on I-10 and SR-60. As shown in Table W, 21 freeway segments are projected to operate at unsatisfactory levels of service.

5.15 General Plan Build-out Year Plus Project Conditions Intersection Levels of Service

A level of service analysis was conducted to evaluate traffic operations at the study area intersections during the a.m. and p.m. peak hours under General Plan Build-out year plus project conditions. The

* Exceeds level of service standard

█ Exceeds level of service standard

¹ Peak Hour Factor. PHF volume assumes a PHF of 0.98.

Note:

According to the CMP, the capacity of a mixed-flow lane is 2,300 vehicles per hour, and the capacity of an HOV lane is 1,600 vehicles per hour.

* Exceeds level of service standard

■ Exceeds level of service standard

¹ Peak Hour Factor. PHF volume assumes a PHF of 0.98.

Note:

According to the CMP, the capacity of a mixed-flow lane is 2,300 vehicles per hour,
and the capacity of an HOV lane is 1,600 vehicles per hour.

results of the analysis are summarized in Table V. Level of service worksheets are included in Appendix C. As shown in Table V, 48 intersections operate at unsatisfactory levels of service.

5.16 General Plan Build-out Year Plus Project Conditions Freeway Segments Levels of Service

Previously referenced Table W summarizes the General Plan Build-out year plus project a.m. and p.m. peak hour freeway mainline traffic volumes and levels of service for the freeway segments on I-10 and SR-60. As shown in Table W, 21 freeway segments are projected to operate at unsatisfactory levels of service.

6.0 MITIGATION MEASURES: INTERSECTIONS

At any intersection that is projected to operate at an unsatisfactory level of service, the City of Banning, City of Beaumont, and County of Riverside require that improvements be identified to maintain conformance with LOS standards. The City of Banning does not have an adopted criterion that defines significant impact at an existing deficient intersection; therefore, a conservative criterion (based on CEQA) was developed to address this potential condition. If an intersection is already operating at an unsatisfactory LOS, any increase in delay due to the addition of one or more cars would constitute a significant project impact. This criterion was applied to study intersections in all the jurisdictions.

For interchanges included in the Transportation Uniform Mitigation Fee (TUMF), the project will participate in the TUMF to mitigate the effects of the project's traffic. Figure F1, included in Appendix F, shows the 2008 Pass Cities TUMF Zone Transportation Improvement Program. As shown in Figure F1, the following interchanges are scheduled for future improvements in the TUMF program:

- I-10 and San Timoteo Canyon-Oak Valley Parkway Interchange;
- I-10 and Beaumont Avenue Interchange;
- I-10 and Pennsylvania Avenue Interchange;
- I-10 and Highland Springs Avenue Interchange;
- I-10 and Sunset Avenue Interchange; and
- I-10 and 8th Street Interchange.

Discussions on necessary improvements required at each deficient intersection follow.

6.1 Existing Plus Project Mitigation Requirements

Under existing plus project conditions, the following circulation improvements would be needed to mitigate intersections to pre-project conditions or better:

- **I-10 Eastbound Ramps/San Timoteo Canyon Drive:** Install a traffic signal.
- **I-10 Westbound Ramps/Oak Valley Parkway:** Install a traffic signal.

- **Elm Avenue/Oak Valley Parkway-14th Street:** Install a traffic signal.
- **Palm Avenue/Oak Valley Parkway-14th Street:** Install a traffic signal.
- **Pennsylvania Avenue/Oak Valley Parkway-14th Street:** Re-stripe the eastbound and westbound approach lanes to accommodate one eastbound and westbound through lane.
- **Pennsylvania Avenue/8th Street:** Add one westbound left-turn lane and one westbound right-turn lane.
- **Pennsylvania Avenue/I-10 Westbound Ramp:** Install a traffic signal.
- **Cherry Avenue/Oak Valley Parkway-14th Street:** Install a traffic signal.
- **Highland Springs Avenue/Brookside Avenue:** Convert two-way stop control to all-way stop control. Add a westbound right-turn lane.
- **Highland Springs Avenue/F Street:** Install a traffic signal.
- **Highland Springs Avenue/Oak Valley Parkway-14th Street-B Street:** Add one westbound left-turn lane and one dedicated northbound right-turn lane and one northbound left-turn lane.
- **Highland Springs Avenue/Starlight Avenue-A Street:** Install a traffic signal. Add one northbound through lane, one southbound left-turn lane, one southbound through lane, and one westbound left-turn lane.
- **Highland Springs Avenue/8th Street-Wilson Street:** Add one northbound through lane and one westbound left-turn lane.
- **Highland Springs Avenue/6th Street-Ramsey Street:** Optimize and coordinate traffic signal cycle with the intersections of Highland Springs Avenue/I-10 Westbound Ramps and Highland Springs Avenue/I-10 Eastbound Ramps.
- **Highland Springs Avenue/I-10 Westbound Ramps:** Optimize and coordinate traffic signal cycle with the intersections of Highland Springs Avenue/I-10 Eastbound Ramps and Highland Springs Avenue/6th Street-Ramsey Street.
- **Highland Springs Avenue/I-10 Eastbound Ramps:** Add an eastbound left-turn lane. Optimize and coordinate traffic signal cycle with the intersections of Highland Springs Avenue/I-10 Westbound Ramps and Highland Springs Avenue/6th Street-Ramsey Street.
- **C Street-Apex Avenue/Wilson Street:** Install a traffic signal and add an eastbound left-turn lane.
- **Highland Home Road/Northern Loop:** Install a traffic signal.
- **Highland Home Road/D Street:** Install a traffic signal.
- **Highland Home Road/Wilson Street:** Install a traffic signal. Add one southbound left-turn lane.
- **Highland Home Road/Ramsey Street:** Install a traffic signal.
- **Sunset Avenue/Wilson Street:** Install a traffic signal.
- **Sunset Avenue/I-10 Eastbound Ramps:** Convert southbound shared through-left turn lane to a left-turn only lane. Add an eastbound left-turn lane.

- **Sunrise Avenue/Wilson Street:** Convert two-way stop control to all-way stop control.
- **8th Street/I-10 Eastbound Ramps:** Install a traffic signal.

A level of service analysis was conducted to evaluate existing plus project conditions with mitigations traffic operations at the study area intersections during the a.m. and p.m. peak hours. Table X summarizes the results of the analysis. Level of service worksheets are included in Appendix C. As shown in Table X, all study area intersections are projected to operate at or better than pre-project (Existing without project) conditions. Figure 29 illustrates the resulting intersection geometric with the identified mitigations.

A signal warrant analysis was conducted for this scenario to determine if a signal is warranted at any of the study area intersections where a signal has been recommended as mitigation. As shown in Appendix G, all intersections where a signal has been recommended as mitigation warrant signals. Thus, the proposed mitigation measures at these intersections are consistent with the signal warrant analysis using the *Manual on Uniform Traffic Control Devices* (MUTCD) Section 4C.04 Warrant 3-B (2003 Edition) Peak Hour Signal Warrant criteria.

6.2 Year 2022 Plus Project (Phase I) With Mitigations

Under year 2022 plus project (Phase I) conditions, the following circulation mitigations would be needed to mitigate levels of service for study intersections to pre-project conditions or better:

- **I-10 Eastbound Ramps/San Timoteo Canyon Drive:** Install a traffic signal. Add one southbound left-turn lane.
- **I-10 Westbound Ramps/Oak Valley Parkway:** Install a traffic signal. Add one eastbound through lane.
- **Elm Avenue/Oak Valley Parkway-14th Street:** Install a traffic signal.
- **Beaumont Avenue/I-10 Westbound Ramps:** Add one northbound left-turn lane.
- **Beaumont Avenue/I-10 Eastbound Ramps:** Add one eastbound right-turn lane.
- **Beaumont Avenue/1st Street:** Add one southbound left-turn lane.
- **Beaumont Avenue/Westward Avenue:** Install a traffic signal.
- **Lamb Canyon Road/California Avenue:** Install a traffic signal. Add one southbound left-turn lane.
- **Palm Avenue/Oak Valley Parkway-14th Street:** Install a traffic signal.
- **Pennsylvania Avenue/Oak Valley Parkway-14th Street:** Add one eastbound through lane and one westbound through lane.
- **Pennsylvania Avenue/8th Street:** Install a traffic signal.
- **Pennsylvania Avenue/I-10 Westbound Ramps:** Install a traffic signal.
- **Cherry Avenue/Oak Valley Parkway-14th Street:** Install a traffic signal.

Traffic Impact Analysis

Existing Plus Project With Mitigations Intersection Geometrics and Stop Control

- **Highland Springs Avenue/Brookside Avenue:** Install a traffic signal. Add one southbound left-turn lane.
- **Highland Springs Avenue/F Street:** Add one northbound right-turn lane.
- **Highland Springs Avenue/Starlight Avenue-A Street:** Install a traffic signal. Add one northbound through lane, one southbound through lane, and one southbound left-turn lane.
- **Highland Springs Avenue/8th Street-Wilson Street:** Add one northbound through lane.
- **Highland Springs Avenue/6th Street-Ramsey Street:** Optimize and coordinate traffic signal cycle with the intersections of Highland Springs Avenue/I-10 Westbound Ramps and Highland Springs Avenue/I-10 Eastbound Ramps.
- **Highland Springs Avenue/I-10 Westbound Ramps:** Optimize and coordinate traffic signal cycle with the intersections of Highland Springs Avenue/I-10 Eastbound Ramps and Highland Springs Avenue/6th Street-Ramsey Street.
- **Highland Springs Avenue/I-10 Eastbound Ramps:** Optimize and coordinate traffic signal cycle with the intersections of Highland Springs Avenue/I-10 Westbound Ramps and Highland Springs Avenue/6th Street-Ramsey Street.
- **Highland Springs Avenue/1st Street-Sun Lakes Boulevard:** Add one northbound right-turn lane.
- **C Street-Apex Avenue/Wilson Street:** Install a traffic signal.
- **Highland Home Road/Northern Loop:** Install a traffic signal.
- **Highland Home Road/Beaumont Road-G Street:** Install a traffic signal.
- **Highland Home Road/Wilson Street:** Install a traffic signal.
- **Highland Home Road/Ramsey Street:** Install a traffic signal.
- **Sunset Avenue/Wilson Street:** Install a traffic signal.
- **Sunset Avenue/I-10 Westbound Ramps:** Install a traffic signal.
- **Sunset Avenue/I-10 Eastbound Ramps:** Install a traffic signal.
- **Sunrise Avenue/Wilson Street:** Install a traffic signal.
- **8th Street/Wilson Street:** Install a traffic signal.
- **8th Street/I-10 Westbound Ramps:** Install a traffic signal.
- **8th Street/I-10 Eastbound Ramps:** Install a traffic signal.
- **San Gorgonio Avenue/Wilson Street:** Add one eastbound left-turn lane.

A level of service analysis was conducted to evaluate year 2022 plus project (Phase I) conditions with mitigations traffic operations at the study area intersections during the a.m. and p.m. peak hours. Table Y summarizes the results of the analysis. Level of service worksheets are included in Appendix C. As shown in Table Y, all study area intersections are projected to operate at or better than pre-project (Year 2022 without project) conditions. Figure 30 illustrates the resulting intersection geometric with the identified mitigations.

 Traffic Impact Analysis
 Year 2022 Plus Project With Mitigations Intersection Geometrics and Stop Control

A signal warrant analysis was conducted for this scenario to determine if a signal is warranted at any of the study area intersections where a signal has been recommended as mitigation. As shown in Appendix G, all intersections where a signal has been recommended as mitigation warrant signals. Thus, the proposed mitigation measures at these intersections are consistent with the signal warrant analysis using the MUTCD Section 4C.04 Warrant 3-B (2003 Edition) Peak Hour Signal Warrant criteria.

6.3 Year 2032 Plus Project (Phases I and II) With Mitigations

Under Year 2032 plus project (Phases I and II) conditions, the following mitigations are recommended in addition to those proposed for Year 2022 plus project (Phase I) conditions. The recommended mitigations improve levels of service for study intersections to pre-project conditions or better:

- **I-10 Eastbound Ramps/San Timoteo Canyon Drive:** Add one westbound left-turn lane, one westbound through lane, and one eastbound through lane.
- **I-10 Westbound Ramps/Oak Valley Parkway:** Convert one northbound right-turn lane to a northbound free right-turn lane. Add one westbound through lane.
- **Beaumont Avenue/8th Street:** Install a traffic signal.
- **Palm Avenue/8th Street:** Install a traffic signal.
- **Pennsylvania Avenue/I-10 Eastbound Ramp:** Install a traffic signal.
- **Pennsylvania Avenue/3rd Street:** Add a two-way left-turn lane.
- **Starlight Avenue/Oak Valley Parkway-14th Street:** Install a traffic signal.
- **Highland Springs Avenue/Brookside Avenue:** Add one northbound through lane.
- **Highland Springs Avenue/F Street:** Install a traffic signal.
- **Highland Springs Avenue/Oak Valley Parkway-14th Street:** Add one northbound left-turn lane.
- **Highland Springs Avenue/Starlight Avenue-A Street:** Install a traffic signal. Add one eastbound right-turn lane with overlap phasing and one westbound left-turn lane.
- **Highland Springs Avenue/Potrero Boulevard:** Install a traffic signal.
- **C Street-Apex Avenue/Wilson Street:** Add one eastbound left-turn lane.
- **Highland Home Road/Northern Loop:** Add one northbound left-turn lane and one southbound through lane.
- **Highland Home Road/Beaumont Road-G Street:** Add a southbound left-turn lane, a northbound through lane, and a westbound left-turn lane.
- **Highland Home Road/D Street:** Install a traffic signal.
- **Highland Home Road/Wilson Street:** Add one southbound left-turn lane.
- **Sunset Avenue/Ramsey Street:** Change the northbound and southbound signal phasing from permitted to protected.
- **Sunset Avenue/I-10 Eastbound Ramps:** Add one eastbound left-turn lane.

- **16th Street/Wilson Street:** Install a traffic signal.
- **8th Street/Ramsey Street:** Add one northbound right-turn lane.
- **8th Street/I-10 Westbound Ramps:** Add one northbound left-turn lane.
- **4th Street/Wilson Street:** Install a traffic signal.
- **San Gorgonio Avenue/Wilson Street:** Install a traffic signal.

A level of service analysis was conducted to evaluate year 2032 plus project (Phases I and II) conditions with mitigations traffic operations at the study area intersections during the a.m. and p.m. peak hours. The results of the analysis are summarized in Table Z. Level of service worksheets are included in Appendix C. As shown in Table Z, all study area intersections are projected to operate at or better than pre-project (Year 2032 without project) conditions. Figure 31 illustrates the resulting intersection geometric with the identified mitigations.

A signal warrant analysis was conducted for this scenario to determine if a signal is warranted at any of the study area intersections where a signal has been recommended as mitigation. As shown in Appendix G, all intersections where a signal has been recommended as mitigation warrant signals. Thus, the proposed mitigation measures at these intersections are consistent with the signal warrant analysis using the MUTCD Section 4C.04 Warrant 3-B (2003 Edition) Peak Hour Signal Warrant criteria.

6.4 Year 2042 Plus Project (Phase III) With Mitigations

Under Year 2042 plus project (Phase III) conditions, the following mitigations are recommended in addition to those proposed for Year 2032 plus project (Phases I and II) conditions. The recommended mitigations improve levels of service for study intersections to pre-project conditions or better.

- **I-10 Eastbound Ramps/San Timoteo Canyon Drive:** Add one eastbound through lane and one westbound right-turn lane.
- **Beaumont Avenue/I-10 Eastbound Ramps:** Add one eastbound left-turn lane.
- **Beaumont Avenue/Westward Avenue:** Add one northbound left-turn lane, one northbound right-turn lane, one southbound left-turn lane, and one southbound right-turn lane.
- **Pennsylvania Avenue/I-10 Westbound Ramps:** Add one northbound through lane and one southbound left-turn lane.
- **Highland Springs Avenue/Brookside Avenue:** Add one northbound right-turn lane, one southbound through lane, one eastbound left-turn lane, one westbound left-turn lane, and one westbound right-turn lane.
- **Highland Springs Avenue/16th Street-Cougar Way:** Install a traffic signal.
- **Highland Springs Avenue/Oak Valley Parkway-14th Street-B Street:** Add one northbound through lane, one northbound right-turn lane, and one southbound through lane.
- **Highland Springs Avenue/Starlight Avenue-A Street:** Add one northbound left-turn lane, one northbound right-turn lane, one southbound right-turn lane, and one eastbound left-turn lane.

Butterfield Specific Plan

Traffic Impact Analysis

Year 2032 Plus Project (Phases I & II) With Mitigations Intersection Geometrics and Stop Control

- **Highland Springs Avenue/8th Street-Wilson Street:** Add one southbound left-turn lane, one southbound right-turn lane, one eastbound left-turn lane, one eastbound right-turn lane, and one westbound left-turn lane.
- **Highland Springs Avenue/I-10 Eastbound Ramps:** Add an eastbound left-turn lane.
- **C Street-Apex Avenue/Wilson Street:** Add one eastbound through lane, one westbound right-turn lane, and one westbound through lane.
- **Highland Home Road/Northern Loop:** Add one northbound left-turn lane and one northbound through lane.
- **Highland Home Road/Beaumont Road-G Street:** Add one southbound left-turn lane.
- **Highland Home Road/F Street:** Install a traffic signal. Add one northbound left-turn lane.
- **Highland Home Road/D Street:** Add one northbound left-turn lane and one northbound through lane.
- **Highland Home Road/Ramsey Street:** Add one southbound left-turn lane and one westbound right-turn lane with overlap phasing.
- **Sunset Avenue/Wilson Street:** Add one northbound left-turn lane, one southbound left-turn lane, one westbound left-turn lane, and one eastbound left-turn lane.
- **Sunset Avenue/I-10 Eastbound Ramps:** Add one southbound left-turn lane.
- **8th Street/I-10 Westbound Ramps:** Add one southbound right-turn lane.
- **8th Street/I-10 Eastbound Ramps:** Add one eastbound left-turn lane.

A level of service analysis was conducted to evaluate year 2042 plus project (Phase III) conditions with mitigations traffic operations at the study area intersections during the a.m. and p.m. peak hours. Table AA summarizes the results of the analysis. Level of service worksheets are included in Appendix C. As shown in Table AA, all study area intersections are projected to operate at or better than pre-project (Year 2042 without project) conditions. Figure 32 illustrates the resulting intersection geometric with the identified mitigations.

A signal warrant analysis was conducted for this scenario to determine if a signal is warranted at any of the study area intersections where a signal has been recommended as mitigation. As shown in Appendix G, all intersections where a signal has been recommended as mitigation warrant signals. Thus, the proposed mitigation measures at these intersections are consistent with the signal warrant analysis using the MUTCD Section 4C.04 Warrant 3-B (2003 Edition) Peak Hour Signal Warrant criteria.

6.5 General Plan Build-out Year Plus Project With Mitigations

Under General Plan Build-out year plus project conditions, the following mitigations are recommended in addition to those proposed for Year 2042 plus project (Phase III) conditions. The recommended mitigations are required to maintain level of service standards.

Table AA - Year 2042 Plus Project (Phase III) With Mitigations Intersection Levels of Service

Butterfield Specific Plan

Traffic Impact Analysis

Year 2042 Plus Project (Phase III) With Mitigations Intersection Geometrics and Stop Control

- **I-10 Eastbound Ramps/San Timoteo Canyon Drive:** Install a traffic signal. Add two southbound left-turn lanes, three eastbound through lanes, one westbound left-turn lane, and two westbound through lanes. Convert the southbound right-turn lane to a free right-turn lane.
- **I-10 Westbound Ramps/Oak Valley Parkway:** Install a traffic signal. Add two eastbound through lanes, one eastbound right-turn lane, and two westbound through lanes. Convert the northbound right-turn lane to a free right-turn lane.
- **Elm Avenue/Oak Valley Parkway-14th Street:** Install a traffic signal. Add one northbound left-turn lane, one southbound left-turn lane, one southbound right-turn lane, one eastbound through lane, one eastbound right-turn lane, and one westbound through lane.
- **Beaumont Avenue/8th Street:** Install a traffic signal. Add one northbound left-turn lane.
- **Beaumont Avenue/I-10 Westbound Ramps:** Add one northbound left-turn lane.
- **Beaumont Avenue/I-10 Eastbound Ramps:** Add one eastbound left-turn lane and one southbound left-turn lane.
- **Beaumont Avenue/1st Street:** Change the eastbound and westbound signal phasing from permitted to protected. Add one northbound through lane, one southbound through lane, one eastbound through lane, one westbound through lane, and one westbound right-turn lane with overlap phasing.
- **Beaumont Avenue/Westward Avenue:** Install a traffic signal. Add one northbound left-turn lane, one northbound right-turn lane, one southbound left-turn lane, one southbound right-turn lane, one two eastbound left-turn lanes, and one westbound left-turn lane.
- **Lamb Canyon Road/California Avenue:** Install a traffic signal. Add one southbound left-turn lane.
- **Palm Avenue/Oak Valley Parkway-14th Street:** Install a traffic signal. Re-stripe the eastbound, westbound, and northbound approach lanes to accommodate one northbound left-turn lane, one northbound through/right-turn lane, one westbound left-turn lane, one westbound through/right-turn lane, one eastbound left-turn lane, and one eastbound through/right-turn lane. Add one eastbound through lane and one westbound through lane.
- **Palm Avenue/8th Street:** Install a traffic signal. Add one westbound left-turn lane.
- **Pennsylvania Avenue/Oak Valley Parkway-14th Street:** Install a traffic signal. Add one eastbound through lane and one westbound through lane.
- **Pennsylvania Avenue/8th Street:** Install a traffic signal. Add one eastbound left-turn lane, one westbound left-turn lane, one westbound right-turn lane, and one northbound right-turn lane.
- **Pennsylvania Avenue/I-10 Westbound Ramps:** Install a traffic signal. Add one northbound right-turn lane, one northbound through lane, and one southbound left-turn lane.
- **Pennsylvania Ave/I-10 Eastbound Ramp:** Install a traffic signal. Add one northbound through lane and one eastbound right-turn lane.
- **Pennsylvania Avenue/3rd Street:** Add a two-way left-turn lane.
- **Cherry Avenue/Oak Valley Parkway-14th Street:** Install a traffic signal. Re-stripe the eastbound approach lanes to accommodate one eastbound through lane.

- **Starlight Avenue/Oak Valley Parkway-14th Street:** Install a traffic signal.
- **Highland Springs Avenue/Brookside Avenue:** Install a traffic signal. Add one northbound through lane, one northbound right-turn lane, two southbound left-turn lanes, one southbound through lane, one eastbound left-turn lane, one eastbound through lane, one eastbound right-turn lane, two westbound left-turn lanes, one westbound through lane, and one westbound right-turn lane.
- **Highland Springs Avenue/16th Street:** Install a traffic signal.
- **Highland Springs Avenue/F Street:** Install a traffic signal. Add one northbound right-turn lane.
- **Highland Springs Avenue/Oak Valley Parkway:** Add one northbound through lane, one northbound left-turn lane, and one southbound through lane.
- **Highland Springs Avenue/Starlight Avenue-A Street:** Install a traffic signal. Add one northbound left-turn lane, one northbound through lane, one northbound right-turn lane with overlap phasing, one southbound left-turn lane, one southbound through lane, one southbound right-turn lane, one eastbound left-turn lane, one eastbound right-turn lane with overlap phasing, and one westbound left-turn lane.
- **Highland Springs Avenue/8th Street-Wilson Street:** Add two northbound through lanes, one southbound right-turn lane, one southbound left-turn lane, one westbound left-turn lane, one eastbound right-turn lane, and add overlap phasing to the westbound right-turn lane.
- **Highland Springs Avenue/6th Street-Ramsey Street:** Optimize and coordinate traffic signal cycle with the intersections of Highland Springs Avenue/I-10 Westbound Ramps and Highland Springs Avenue/I-10 Eastbound Ramps. Add one northbound left-turn lane, one northbound through lane, one southbound left-turn lane, one southbound through lane, and one westbound left-turn lane.
- **Highland Springs Avenue/I-10 Westbound Ramps:** Optimize and coordinate the traffic signal cycle with the intersections of Highland Springs Avenue/I-10 Eastbound Ramps and Highland Springs Avenue/6th Street-Ramsey Street. Add one northbound left-turn lane, one northbound through lane, one westbound left-turn lane, and one westbound right-turn lane.
- **Highland Springs Avenue/I-10 Eastbound Ramps:** Optimize and coordinate traffic signal cycle with the intersections of Highland Springs Avenue/I-10 Westbound Ramps and Highland Springs Avenue/6th Street-Ramsey Street. Add one northbound through lane, one southbound left-turn lane, one eastbound left-turn lane, and one eastbound right-turn lane.
- **Highland Springs Avenue/1st Street-Sun Lakes Boulevard:** Add one northbound through lane, one northbound right-turn lane with overlap phasing, one southbound left-turn lane, one eastbound right-turn lane with overlap phasing, two westbound left-turn lanes, and convert westbound through/left-turn lane to westbound through lane and convert the westbound free right-turn lane to a right-turn lane.
- **Highland Springs Avenue/Potrero Boulevard:** Install a traffic signal.
- **C Street-Apex Avenue/Wilson Street:** Install a traffic signal. Add one eastbound left-turn lane, one eastbound through lane, and one westbound through lane.

- **Highland Home Road/Northern Loop:** Install a traffic signal. Add one northbound left-turn lane, one northbound through lane, one southbound through lane, and one southbound right-turn lane.
- **Highland Home Road/Beaumont Road-G Street:** Install a traffic signal. Add one northbound through lane, one northbound right-turn lane, two southbound left-turn lanes, and one westbound left-turn lane.
- **Highland Home Road/F Street:** Install a traffic signal. Add one northbound left-turn lane.
- **Highland Home Road/D Street:** Install a traffic signal. Add one northbound left-turn lane.
- **Highland Home Road/Wilson Street:** Install a traffic signal. Add one northbound through lane, two southbound left-turn lanes, one southbound through lane, and one westbound right-turn lane with overlap phasing.
- **Highland Home Road/Ramsey Street:** Install a traffic signal. Add one westbound right-turn lane with overlap phasing.
- **Sunset Avenue/Wilson Street:** Install a traffic signal. Add two northbound left-turn lanes, one northbound through lane, one southbound left-turn lane, one southbound through lane, one southbound right-turn lane with overlap phasing, two eastbound left-turn lanes, one eastbound through lane, one eastbound right-turn lane, two westbound left-turn lanes, one westbound through lane, and one westbound right-turn lane with overlap phasing.
- **Sunset Avenue/Ramsey Street:** Add one northbound left-turn lane, one northbound right-turn lane, one southbound left-turn lane, one southbound right-turn lane, one eastbound right-turn lane with overlap phasing, and one westbound left-turn lane.
- **Sunset Avenue/I-10 Westbound Ramps:** Install a traffic signal. Add one free southbound right-turn lane.
- **Sunset Avenue/I-10 Eastbound Ramps:** Install a traffic signal. Add two eastbound left-turn lanes and one southbound left-turn lane.
- **Sunrise Avenue/Wilson Street:** Install a traffic signal. Add one eastbound through/left-turn lane and convert the westbound right-turn lane to add one westbound through/right-turn lane.
- **16th Street/Wilson Street:** Install a traffic signal.
- **8th Street/Wilson Street:** Install a traffic signal. Add one northbound left-turn lane, one southbound left-turn lane, and one westbound right-turn lane.
- **8th Street/Ramsey Street:** Add one northbound left-turn lane, one northbound right-turn lane, one eastbound through lane, and one westbound left-turn lane.
- **8th Street/I-10 Westbound Ramps:** Install a traffic signal. Add two northbound left-turn lanes, one northbound through lane, and one southbound through lane.
- **8th Street/I-10 Eastbound Ramps:** Install a traffic signal. Add one northbound through lane, one southbound left-turn lane, one southbound through lane, one eastbound left-turn lane, and one eastbound right-turn lane.
- **4th Street/Wilson Street:** Install a traffic signal.

- **San Gorgonio Avenue/Wilson Street:** Install a traffic signal. Add one eastbound left-turn lane, one eastbound through lane, and one westbound through/left-turn lane.

A level of service analysis was conducted to evaluate General Plan Build-out year plus project with mitigations traffic operations at the study area intersections during the a.m. and p.m. peak hours. The results of the analysis are summarized in Table AB. Level of service worksheets are included in Appendix C. As shown in Table AB, all study area intersections are projected to operate at satisfactory levels of service. Figure 33 illustrates the resulting intersection geometric with the identified mitigations.

A signal warrant analysis was conducted for this scenario to determine if a signal is warranted at any of the study area intersections where a signal has been recommended as mitigation. As shown in Appendix G, all intersections where a signal has been recommended as mitigation warrant signals. Thus, the proposed mitigation measure at these intersections are consistent with the signal warrant analysis using the MUTCD Section 4C.04 Warrant 3-B (2003 Edition) Peak Hour Signal Warrant criteria.

As noted earlier, the mitigations required to maintain satisfactory levels of service for study area intersections are in conformance with the City of Banning General Plan Circulation Element (updated June 2005), City of Beaumont General Plan Circulation Element (revised December 2004), and the Pass Area Circulation Plan, which is part of the RCIP.

7.0 MITIGATION MEASURES: FREEWAY SEGMENTS

Mitigations are proposed for freeway segments that exceed the Riverside County CMP LOS criteria (LOS E) for existing plus project, 2022 plus project (Phase I), 2032 plus project (Phases I and II), 2042 plus project (Phase III), and General Plan Build-out conditions. Each directional freeway segment was analyzed as a separate entity and improvements were independently recommended to mitigate the LOS to a satisfactory level (LOS E or better). As a result, the recommended number of lanes for adjacent freeway segments may not be equal or there could be an imbalance in number of lanes in eastbound and westbound directions. It should be noted that the recommended mitigations are for assessment purposes only and were identified because they would provide satisfactory operations. Hence these recommended improvements should not be directly implemented. A traffic operations analysis should be conducted to evaluate the need (number and type of lanes in each direction) for future widening of the section of the freeway within the study area.

7.1 Year 2022 Plus Project (Phase I) Freeway Mitigation Requirements

Under year 2022 plus project conditions, the following lane mitigations are suggested for the freeway segments that do not meet the Riverside County CMP LOS standard of E:

- **Eastbound Segments on Interstate 10:**
 - **Cherry Valley Boulevard to Highland Springs Avenue:** Add one High-Occupancy Vehicle (HOV) lane.

Table AB - General Plan Build-out Year Plus Project With Mitigations Intersection Levels of Service

Notes:

V/C = Volume/Capacity Ratio

LOS = Level of Service

TWSC = Two-Way Stop Control

For TWSC intersections, reported delay is for worst-case approach.

7.2 Year 2032 Plus Project (Phases I and II) Freeway Mitigation Requirements

Under year 2032 plus project conditions, the following mitigations are recommended in addition to those proposed for Year 2022 plus project (Phase I) conditions:

- **Eastbound Segments on Interstate 10:**
 - **Cherry Valley Boulevard to SR-60:** Add one mixed-flow lane.
 - **Pennsylvania Avenue to Highland Springs Avenue:** Add one mixed-flow lane.
 - **Highland Springs Avenue to 22nd Street:** Add one HOV lane.
- **Eastbound Segments on State Route 60:**
 - **Jack Rabbit Trail to I-10:** Add one HOV lane.
- **Westbound Segments on Interstate 10:**
 - **Cherry Valley Boulevard to Sunset Avenue:** Add one HOV lane.
 - **Cherry Valley Boulevard to Oak Valley Parkway:** Add one mixed-flow lane.

7.3 Year 2042 Plus Project (Phase III) Freeway Mitigation Requirements

Under year 2042 plus project conditions, the following mitigations are recommended in addition to those proposed for Year 2032 plus project (Phases I and II) conditions:

- **Eastbound Segments on Interstate 10:**
 - **Cherry Valley Boulevard to Oak Valley Parkway:** Add one mixed-flow lane.
 - **Beaumont Avenue to Pennsylvania Avenue:** Add one mixed-flow lane.
 - **Highland Springs Avenue to Sunset Avenue:** Add one mixed-flow lane.
 - **22nd Street to Hargrave Street:** Add one HOV lane.
- **Westbound Segments on Interstate 10:**
 - **Cherry Valley Boulevard to Oak Valley Parkway:** Add one mixed-flow lane.
 - **Oak Valley Parkway to Sunset Avenue:** Add one mixed-flow lane.
 - **Sunset Avenue to Hargrave Street:** Add one HOV lane.
- **Westbound Segments on State Route 60:**
 - **Jack Rabbit Trail to I-10:** Add one HOV lane.

7.4 Freeway Mitigation Requirements

Under General Plan Build-out plus project conditions, the following mitigations are suggested for the freeway segments that do not meet the Riverside County CMP LOS standard of E:

- **Eastbound Segments on Interstate 10:**
 - **Cherry Valley Boulevard to Hargrave Street:** Add one HOV lane.
 - **Cherry Valley Boulevard to Oak Valley Parkway:** Add two mixed-flow lanes.
 - **Oak Valley Parkway to SR-60:** Add one mixed-flow lane.
 - **Beaumont Avenue to Sunset Avenue:** Add one mixed-flow lane.
- **Eastbound Segments on State Route 60:**
 - **Jack Rabbit Trail to I-10:** Add one HOV lane.
- **Westbound Segments on Interstate 10:**
 - **Cherry Valley Boulevard to Ramsey Street:** Add one HOV lane.
 - **Cherry Valley Boulevard to Oak Valley Parkway:** Add two mixed-flow lanes.
 - **Oak Valley Parkway to 22nd Street:** Add one mixed-flow lane.
- **Westbound Segments on State Route 60:**
 - **Jack Rabbit Trail to I-10:** Add one HOV lane.

7.5 Freeway Segment Levels of Service with Mitigations

Mitigations are proposed for freeway segment that exceed the Riverside County CMP LOS criteria (LOS E) for existing plus project, 2022 plus project (Phase I), 2032 plus project (Phases I and II), 2042 plus project, and General Plan Build-out conditions. Each directional freeway segment was analyzed as a separate entity and improvements were independently recommended to mitigate the LOS to a satisfactory level (LOS D or better). As a result, the recommended number of lanes for adjacent freeway segments may not be equal or there could be an imbalance in number of lanes in eastbound and westbound directions. It should be noted that the recommended mitigations are for assessment purposes only and were identified because they would provide satisfactory operations. These improvements cannot be directly implemented by the City, as the freeways and state highways are under the jurisdiction of Caltrans. Any future improvements (including freeway widening) should be coordinated with Caltrans which may require additional operations analysis.

Table AC presents the freeway segment levels of service with the recommended mitigations for year 2022 plus project (Phase I) conditions. Table AD presents the freeway segment levels of service with the recommended mitigations for year 2032 plus project (Phases I & II) conditions. Table AE presents the freeway segment levels of service with the recommended mitigations for year 2042 plus project (Phase III) conditions. Table AF presents the freeway segment levels of service with the recommended mitigations year for build-out year plus project conditions. As seen in Tables AC through AF, with the implementation of the recommended mitigations, the minimum level of service standards are maintained at the study area freeway segments where significant project impacts are identified.

7.6 Use of Intelligent Transportation Systems (ITS) by Caltrans

Intelligent Transportation Systems (ITS) effectiveness is well recognized in the United States Department of Transportation, state departments and agencies, academic institutions and businesses.

¹ Peak Hour Factor. PHF volume assumes a PHF of 0.98.

Note:

According to the CMP, the capacity of a mixed-flow lane is 2,300 vehicles per hour,
and the capacity of an HOV lane is 1,600 vehicles per hour.

Caltrans and USDOT's Research and Innovative Technology Administration (RITA) have numerous items on their websites highlighting the benefits and opportunities regarding ITS. A more detailed description of ITS follows:

Types of ITS –Caltrans identifies 16 types of ITS, divided in to two categories: Intelligent Infrastructure and Intelligent Vehicles. Intelligent Infrastructure are comprised of:

- Arterial Management
- Freeway Management
- Crash Prevention & Safety
- Road Weather Manage
- Roadway Operations & Maintenance
- Transit Management
- Traffic Incident Management
- Emergency Management
- Electronic Payment & Pricing
- Traveler Information
- Information Management
- Commercial Vehicle Operations
- Intermodal Freight

Intelligent Vehicles is comprised of:

- Collision Avoidance
- Driver Assistance
- Collision Notification

Intelligent infrastructure, specifically Arterial Management and Freeway Management are the most relevant for this region due to the qualities of the region, this, project and the benefits they produce. Benefits of implementing ITS measures include congestion reduction, reduced queuing, increased capacity, emission reductions, safety improvements, and reduced fuel consumption.

Arterial management systems manage traffic along arterial roadways, employing traffic detectors, traffic signals, and various means of communicating information to travelers. These systems make use of information collected by traffic surveillance devices to smooth the flow of traffic along travel corridors. They also disseminate important information about travel conditions to travelers via technologies such as dynamic message signs (DMS) or highway advisory radio (HAR).

There are six major ITS functions that make up freeway management systems:

- Traffic surveillance systems use detectors and video equipment to support the most advanced freeway management applications.
- Traffic control measures on freeway entrance ramps, such as ramp meters, can use sensor data to optimize freeway travel speeds and ramp meter wait times.
- Lane management applications can address the effective capacity of freeways and promote the use of high-occupancy commute modes.
- Special event transportation management systems can help control the impact of congestion at stadiums or convention centers. In areas with frequent events, large changeable destination signs or other lane control equipment can be installed. In areas with occasional or one-time events, portable equipment can help smooth traffic flow.
- Advanced communications have improved the dissemination of information to the traveling public. Motorists are now able to receive relevant information on location specific traffic conditions in a number of ways, including dynamic message signs, highway advisory radio, in-vehicle signing, or specialized information transmitted only to a specific set of vehicles.

Arterial management systems manage traffic along arterial roadways, employing traffic detectors, traffic signals, and various means of communicating information to travelers. These systems make use of information collected by traffic surveillance devices to smooth the flow of traffic along travel corridors. They also disseminate important information about travel conditions to travelers via technologies such as dynamic message signs (DMS) or highway advisory radio (HAR).

8.0 PROJECT CONTRIBUTION TO TOTAL NEW VOLUMES

The contribution of project increment traffic to total new traffic was determined for all study area intersections. Table AG summarizes the project contributions to study area intersections. Peak hour project traffic is the total project traffic volume at each study area intersection, as described in the Project Traffic section. The total new traffic is the difference between the General Plan Build-out year (2045) plus project traffic volumes and the existing peak hour traffic volumes. The project percentage of contribution to total new traffic is calculated by dividing the project increment by the total new traffic.

The contribution of project increment traffic to total new freeway traffic was determined for all study area freeway segments. Table AH summarizes the project contributions to study area freeway segments for the General Plan Build-out year conditions. The final project percentage of contribution for each direction is based on the project contribution in the worst-case (volume to capacity, or V/C) scenario between a.m. and p.m. peak hours.

Table AG- Project Contribution to Total New Traffic

Intersection	A.M. Peak Hour					P.M. Peak Hour					Worst Case

[^] The interchange on Pennsylvania Avenue is expected to be upgraded to a full diamond interchange before General Plan build-out year.

¹ GPBO: General Plan Build-out

² Project Contribution Percentage (%) based on project contribution in the worse case (V/C) scenario between a.m. and p.m. peak hours.

9.0 INTERSECTION IMPROVEMENTS FOR CITY OF BANNING: LOS D

Since the City of Beaumont and the County of Riverside uses LOS D as the threshold of acceptability in community development areas, a separate analysis with LOS D as standard has been performed for intersections in the City of Banning having LOS C standard for project opening years and General Plan Build-out conditions. The following improvements are required to maintain an LOS D standard at these intersections. (Intersections having same mitigations for both LOS C and LOS D standards have not been listed.)

9.1 Existing Plus Project Mitigation Requirements for LOS D

The following circulation mitigations are required to mitigate levels of service for study intersections to pre-project conditions or better to meet LOS D criteria:

- **Highland Springs Avenue/F Street:** Install a traffic signal.
- **Highland Springs Avenue/Oak Valley Parkway-14th Street-B Street:** Add one westbound left-turn lane and one dedicated northbound right-turn lane ~~and one northbound left-turn lane.~~
- **Highland Springs Avenue/Starlight Avenue-A Street:** Install a traffic signal. Add one northbound through lane, one southbound left-turn lane, one southbound through lane, and one westbound left-turn lane.
- **Highland Springs Avenue/8th Street-Wilson Street:** Add one northbound through lane ~~and one westbound left-turn lane.~~
- **C Street-Apex Avenue/Wilson Street:** Install a traffic signal and add an eastbound left-turn lane.
- **Highland Home Road/Northern Loop:** Install a traffic signal.
- **Highland Home Road/D Street:** Install a traffic signal.
- **Highland Home Road/Wilson Street:** Install a traffic signal. Add one southbound left-turn lane.
- **Sunset Avenue/Wilson Street:** Install a traffic signal.

A level of service analysis was conducted to evaluate existing plus project with mitigations for LOS D traffic operations at the study area intersections during the a.m. and p.m. peak hours. The results of the analysis are summarized in Table AI. Level of service worksheets are included in Appendix C. As shown in Table AI, all study area intersections are projected to operate at LOS D or better. Previously referenced Figure 29 illustrates the resulting intersection geometric with the identified mitigations.

A signal warrant analysis was conducted for this scenario to determine if a signal is warranted at any of the study area intersections where a signal has been recommended as mitigation. As shown in Appendix G, all intersections where a signal has been recommended as mitigation warrant signals. Thus, the proposed mitigation measure at these intersections are consistent with the signal warrant analysis using the MUTCD Section 4C.04 Warrant 3-B (2003 Edition) Peak Hour Signal Warrant criteria.

Table AI - Existing Plus Project With Mitigations Intersection Levels of Service for LOS D

9.2 Year 2022 Plus Project (Phase I) With Mitigations for LOS D

The following circulation mitigations are required to mitigate levels of service for study intersections to pre-project conditions or better to meet LOS D criteria:

- **Highland Springs Avenue/Starlight Avenue-A Street:** Install a traffic signal. Add one northbound through lane, one southbound through lane, and one southbound left-turn lane.
- **Highland Springs Avenue/8th Street-Wilson Street:** Add one northbound through lane.
- **C Street-Apex Avenue/Wilson Street:** Install a traffic signal.
- **Highland Home Road/Northern Loop:** Install a traffic signal.
- **Highland Home Road/Beaumont Road-G Street:** Install a traffic signal.
- **8th Street/Wilson Street:** Install a traffic signal.

A level of service analysis was conducted to evaluate year 2022 plus project with mitigations for LOS D traffic operations at the study area intersections during the a.m. and p.m. peak hours. The results of the analysis are summarized in Table AJ. Level of service worksheets are included in Appendix C. As shown in Table AJ, all study area intersections are projected to operate at LOS D or better. Previously referenced Figure 30 illustrates the resulting intersection geometric with the identified mitigations.

A signal warrant analysis was conducted for this scenario to determine if a signal is warranted at any of the study area intersections where a signal has been recommended as mitigation. As shown in Appendix G, all intersections where a signal has been recommended as mitigation warrant signals. Thus, the proposed mitigation measure at these intersections are consistent with the signal warrant analysis using the MUTCD Section 4C.04 Warrant 3-B (2003 Edition) Peak Hour Signal Warrant criteria.

9.3 Year 2032 Plus Project (Phases I and II) With Mitigations for LOS D

The following circulation mitigations are required to mitigate levels of service for study intersections to pre-project conditions in addition to the proposed year 2022 plus project mitigation measures:

- **Highland Springs Avenue/F Street:** Install a traffic signal.
- **Highland Springs Avenue/Oak Valley Parkway-14th Street:** Add one northbound left-turn lane.
- **Highland Springs Avenue/Starlight Avenue-A Street:** Install a traffic signal. Add ~~one eastbound right-turn lane with overlap phasing and one westbound left-turn lane.~~
- **C Street-Apex Avenue/Wilson Street:** Add one eastbound left-turn lane.
- **Highland Home Road/Northern Loop:** Add one northbound left-turn lane ~~and one southbound through lane.~~
- **Highland Home Road/Beaumont Road-G Street:** Add one southbound left-turn lane, ~~a northbound through lane and a westbound left-turn lane.~~

Table AJ - Year 2022 Plus Project (Phase I) With Mitigations Intersection Levels of Service for LOS D

Notes:

V/C = Volume/Capacity Ratio

LOS = Level of Service

AWSC=All-Way Stop Control

- **Highland Home Road/D Street:** Install a traffic signal.
- **16th Street/Wilson Street:** Install a traffic signal.

A level of service analysis was conducted to evaluate year 2032 plus project with mitigations for LOS D traffic operations at the study area intersections during the a.m. and p.m. peak hours. The results of the analysis are summarized in Table AK. Level of service worksheets are included in Appendix C. As shown in Table AK, all study area intersections are projected to operate at LOS D or better. Previously referenced Figure 31 illustrates the resulting intersection geometric with the identified mitigations.

A signal warrant analysis was conducted for this scenario to determine if a signal is warranted at any of the study area intersections where a signal has been recommended as mitigation. As shown in Appendix G, all intersections where a signal has been recommended as mitigation warrant signals. Thus, the proposed mitigation measure at these intersections are consistent with the signal warrant analysis using the MUTCD Section 4C.04 Warrant 3-B (2003 Edition) Peak Hour Signal Warrant criteria.

9.4 Year 2042 Plus Project (Phase III) With Mitigations for LOS D

The following circulation mitigations are required recommended to mitigate levels of service for study intersections to pre-project conditions in addition to the proposed year 2032 plus project mitigation measures:

- **Highland Springs Avenue/16th Street-Cougar Way:** Install a traffic signal.
- **Highland Springs Avenue/Oak Valley Parkway-14th Street-B Street:** Add ~~one northbound through lane,~~ one northbound right-turn lane and one southbound through lane.
- **Highland Springs Avenue/Starlight Avenue-A Street:** Add ~~one northbound left-turn lane,~~ one northbound right-turn lane and one southbound right-turn lane, ~~and one eastbound left-turn lane.~~
- **C Street-Apex Avenue/Wilson Street:** Add one eastbound through lane, one westbound right-turn lane, and one westbound through lane.
- **Highland Home Road/D Street:** Add one northbound left-turn lane and one northbound through lane.

A level of service analysis was conducted to evaluate year 2042 plus project with mitigations for LOS D traffic operations at the study area intersections during the a.m. and p.m. peak hours. The results of the analysis are summarized in Table AL. Level of service worksheets are included in Appendix C. As shown in Table AL, all study area intersections are projected to operate at LOS D or better. Previously referenced Figure 32 illustrates the resulting intersection geometric with the identified mitigations.

A signal warrant analysis was conducted for this scenario to determine if a signal is warranted at any of the study area intersections where a signal has been recommended as mitigation. As shown in Appendix G, all intersections where a signal has been recommended as mitigation warrant signals. Thus, the

proposed mitigation measure at these intersections are consistent with the signal warrant analysis using the MUTCD Section 4C.04 Warrant 3-B (2003 Edition) Peak Hour Signal Warrant criteria.

9.5 General Plan Build-Out Year Plus Project With Mitigations for LOS D

The following improvements are required to maintain an LOS standard of D in the City of Banning:

- **Highland Springs Avenue/16th Street:** Install a traffic signal.
- **Highland Springs Avenue/F Street:** Install a traffic signal.
- **Highland Springs Avenue/Oak Valley Parkway:** Add one northbound through lane, one northbound left-turn lane, and one southbound through lane.
- **Highland Springs Avenue/Starlight Avenue-A Street:** Install a traffic signal. Add ~~one northbound left-turn lane~~, one northbound through lane, one northbound right-turn lane with overlap phasing, one southbound left-turn lane, one southbound through lane, one southbound right-turn lane, ~~one eastbound left-turn lane~~, one eastbound right-turn lane with overlap phasing, and one westbound left-turn lane.
- **Highland Springs Avenue/8th Street-Wilson Street:** Add one northbound through lane, one southbound right-turn lane, one southbound left-turn lane, ~~one westbound left-turn lane~~, one eastbound right-turn lane, and ~~add overlap phasing to the~~ one westbound right-turn lane.
- **Highland Springs Avenue/1st Street-Sun Lakes Boulevard:** Add ~~one northbound through lane~~, one northbound right-turn lane with overlap phasing, one southbound left-turn lane, one eastbound right-turn lane with overlap phasing, one westbound left-turn lane, convert westbound through/left-turn lane to westbound through lane, and convert the westbound free right-turn lane to a right-turn lane.
- **Highland Springs Avenue/Potrero Boulevard:** Install a traffic signal.
- **C Street-Apex Avenue/Wilson Street:** Install a traffic signal. Add one eastbound left-turn lane ~~one eastbound through lane~~, and one westbound through lane.
- **Highland Home Road/Northern Loop:** Install a traffic signal. Add one northbound left-turn lane ~~one northbound through lane~~, and one southbound through lane, ~~and one southbound right-turn lane~~.
- **Highland Home Road/Beaumont Road-G Street:** Install a traffic signal. Add one northbound through lane, one northbound right-turn lane, one southbound left-turn lane, and one westbound left-turn lane.
- **Highland Home Road/F Street:** Install a traffic signal. Add one northbound left-turn lane.
- **Highland Home Road/D Street:** Install a traffic signal. Add one northbound left-turn lane.
- **Highland Home Road/Wilson Street:** Install a traffic signal. Add one northbound through lane, two southbound left-turn lanes, one southbound through lane, and one westbound right-turn lane with overlap phasing.
- **Sunset Avenue/Wilson Street:** Install a traffic signal. Add one northbound left-turn lane, one northbound through lane, one southbound left-turn lane, one southbound through lane, one southbound right-turn lane with overlap phasing, one eastbound left-turn lane, one

- eastbound through lane, ~~one eastbound right-turn lane~~, one westbound left-turn lane, one westbound through lane, and one westbound right-turn lane with overlap phasing.
- **Sunrise Avenue/Wilson Street:** Install a traffic signal. Add one eastbound through/left-turn lane and convert westbound right-turn lane to add one westbound through/right-turn lane.
 - **16th Street/Wilson Street:** Install a traffic signal.
 - **8th Street/Wilson Street:** Install a traffic signal. Add one northbound left-turn lane, one southbound left-turn lane, and one westbound right-turn lane.
 - **4th Street/Wilson Street:** Install a traffic signal.
 - **San Gorgonio Avenue/Wilson Street:** Install a traffic signal. Add one eastbound left-turn lane, one eastbound through lane, and one westbound through/left-turn lane.

A level of service analysis was conducted to evaluate General Plan Build-out year plus project with mitigations for LOS D traffic operations at the study area intersections during the a.m. and p.m. peak hours. The results of the analysis are summarized in Table AM. Level of service worksheets are included in Appendix C. As shown in Table AM, all study area intersections are projected to operate at LOS D or better. Previously referenced Figure 33 illustrates the resulting intersection geometric with the identified mitigations.

A signal warrant analysis was conducted for this scenario to determine if a signal is warranted at any of the study area intersections where a signal has been recommended as mitigation. As shown in Appendix G, all intersections where a signal has been recommended as mitigation warrant signals. Thus, the proposed mitigation measure at these intersections are consistent with the signal warrant analysis using the MUTCD Section 4C.04 Warrant 3-B (2003 Edition) Peak Hour Signal Warrant criteria.

As noted earlier, the improvements required to maintain satisfactory levels of service for study area intersections are in conformance with the City of Banning General Plan Circulation Element (updated June 2005), City of Beaumont General Plan Circulation Element (revised December 2004), and the Pass Area Circulation Plan, which is part of the RCIP.

Per Riverside County guidelines, this TIA addresses some of the safety and operational issues as stated in the intersection improvements sections. Other safety and operational issues (e.g., parking restrictions, sight distance studies) are typically analyzed in focused traffic studies and are therefore not included in this report.

10.0 PROPOSED INTERSECTION IMPROVEMENTS – FUNDING PROGRAMS/SOURCES

Infrastructure improvements are needed to accommodate the projected population growth in the Pass Area region. As a part of the infrastructure improvements, several roadway segments, freeway interchanges, and intersections will have to be improved to accommodate the corresponding growth in traffic in the future. Several funding mechanisms/programs, both regional and local, have been developed by jurisdictions to address the long-term transportation infrastructure needs for the region. Typically, these programs collect a mitigation fee for a listed set of improvements along roadway

Notes:

V/C = Volume/Capacity Ratio

LOS = Level of Service

TWSC = Two-Way Stop Control

AWSC=All-Way Stop Control

For TWSC intersections, reported delay is for worst-case approach.

segments, interchanges, and intersections. The following are the fee programs that include the roadway segments, interchanges, and intersections in the study area for the proposed project:

- The Western Riverside Council of Governments (WRCOG), Transportation Uniform Mitigation Fee (TUMF);
- City of Beaumont Road and Bridge Fee;
- City of Beaumont Traffic Signal, Railroad Crossing and Fire Station Impact Mitigation Fee; and
- City of Banning Development Impact Fee (specifically the Traffic Control Facility Fee).

The City of Banning's General Plan (GP) and supporting Environmental Impact Report (EIR) contains City commitments (i.e., mitigation measures) for assuring that acceptable levels of service are maintained and currently accounts for the development of the existing Deutsch Specific Plan, which is consistent with the density and intensity of land uses for the proposed Butterfield Specific Plan project. Policy 3 and Program 3A of the GP Circulation Element provide that the City Public Works Department shall establish and maintain a 5-year Capital Improvement Program (CIP) and update it annually. Program 4B provides that the City will aggressively pursue the addition of Banning projects to the TUMF program. Policy 6 and Program 6B provide that the City will maintain peak hour LOS C or better on all local intersections, except those on Ramsey Street and at I-10 interchanges, where LOS D or better shall be maintained and that the City will periodically review current traffic volumes and the actual pattern of development to coordinate, program and, as necessary, revise road improvements. Policy 7 provides that new development proposals shall pay their fair share for the improvement of streets within and surrounding their projects on which they have an impact, including roadways, bridges, grade separations, and traffic signals.

10.1 WRCOG Transportation Uniform Mitigation Fee (TUMF)¹

The underlying purpose of the TUMF program is "the need to establish a comprehensive funding source to mitigate the cumulative regional transportation impacts of new development on regional arterial highways." As new development occurs in western Riverside County, the cumulative transportation impacts of this new development are reflected in increased demand for transportation infrastructure leading to decreased levels of service, increased delay and increased congestion on regional transportation facilities, and an overall decline in regional mobility. Therefore, the need to invest in additional transportation infrastructure to meet the increased travel demand and to sustain pre-development traffic conditions to "keep traffic flowing" represents the fundamental premise of the TUMF program.

Under the TUMF program, a network of both backbone roadways and freeway interchanges that connect to the backbone roadways are identified. Within the City of Banning, the following roadway segments are included in the TUMF program and are proposed to be improved:

- **8th Street between Wilson Street and I-10:** Widen to a 2-lane facility;

¹ Source: Transportation Uniform Mitigation Fee 10-Year Strategic Plan and Transportation Improvement Program Development Guidelines (Updated November 15, 2006, and Amended June 05, 2007) and WRCOG TUMF Nexus Study – 2009 Program Update.

- **Highland Springs Avenue between Cherry Valley Boulevard and Wilson Street:** Widen to a 4-lane facility;
- **Highland Springs Avenue between Wilson Street and Sun Lakes Boulevard:** Widen to a 6-lane facility;
- **Ramsey Street between Highland Springs Avenue and 8th Street:** Widen to a 4-lane facility;
- **Sun Lakes Boulevard between Highland Springs Avenue and Highland Home Road:** Widen to a 4-lane facility;
- **Sun Lakes Boulevard between Highland Home Road and Sunset Avenue:** Widen to a 2-lane facility; and
- **Wilson Street between Highland Springs Avenue and 8th Street:** Widen to a 4-lane facility.

The Highland Springs Avenue and Sunset Avenue interchanges with I-10 are also included in the TUMF program. It should be noted that a typical roadway standard for TUMF network improvements assumes the following standard design characteristics that are generally consistent with the minimum statutory requirements for roadway capacity expansion in the region:

- 12-foot wide asphalt concrete roadway lanes;
- 14-foot painted median (or center left-turn lane);
- 4-foot wide paved shoulder/bike lanes (on the roadway);
- Curb and gutter with accompanying roadway storm water drainage; and
- 6-foot wide sidewalks.

The unit cost values for the TUMF were developed for various eligible improvement types that all provide additional capacity needed to mitigate the cumulative regional traffic impacts of new development to facilities on the regional system of highways and arterials. Eligible improvement types include:

- Construction of additional network roadway lanes;
- Construction of new network roadway segments;
- Expansion of existing network bridge structures;
- Construction of new network bridge structures;
- Expansion of existing network interchanges with freeways;
- Construction of new network interchanges with freeways;
- Grade separation of existing network at-grade railroad crossings; and
- Expansion of existing network-to-network intersections.

The roadway improvements in excess of the typical roadway standard (as described above) may not be eligible for TUMF. Where improvements in excess of the typical roadway standard are to be

implemented, the equivalent value for implementing the typical roadway standard will be eligible for funding as part of the TUMF program.

Several intersections along the TUMF network roadway are included in the Butterfield Specific Plan Traffic Impact Analysis.

10.2 City of Beaumont Road and Bridge Fee¹

The transportation facility fee known as the Beaumont Road and Bridge Fee was developed to fund the design, construction, and upgrade of certain transportation facilities necessary to serve future development in the City. The facilities to be funded by the transportation facility fee are listed below:

- SR-60/Potrero Boulevard Interchange;
- I-10/Oak Valley Parkway Interchange;
- I-10/SR-79 Interchange;
- I-10/Highland Springs Avenue Interchange;
- I-10/Pennsylvania Avenue Interchange;
- Potrero Boulevard between Oak Valley Parkway and 1st Street;
- Beaumont Avenue (SR-79) between 6th Street and Westward Avenue;
- Pennsylvania Avenue between 6th Street and 1st Street; and
- Highland Springs Avenue between 6th Street and 1st Street.

Even though the portion of Oak Valley Parkway between Highland Springs and the western boundary of the City of Beaumont is not currently included in the Beaumont Road and Bridge Fee program, it was previously included in the TUMF program and has been widening to its ultimate cross-section within the City of Beaumont. The ultimate build-out of the transportation facilities listed above are planned to be consistent with the Circulation Element of the City of Beaumont's General Plan. All the I-10 interchanges listed above were included in the Butterfield Specific Plan Traffic Impact Analysis.

10.3 City of Beaumont Traffic Signal, Railroad Crossing and Fire Station Impact Mitigation Fee²

The ordinance for establishing the traffic signal, railroad crossing, and fire station impact mitigation fee included the establishment separate fee account for Traffic Signal Mitigation and the fees collected in this account would be expended solely for the purchase and installation of traffic signals at intersections throughout the City. The ordinance does not list the intersections but has included a total of 65 locations within the City that will require signalization in the future. All major

¹ Resolution of the City of Beaumont Amending the Beaumont Road and Bridge Area Benefit District Transportation Facility Fee (Resolution No. 2008-44) – November 2008.

² An Ordinance of the City Council of the City of Beaumont Establishing Traffic Signal and Railroad Crossing Mitigation Fees, September 1999 (Ordinance no. 794).

intersections (collector-to-collector) within the City would be included in the Traffic Signal Mitigation Fee.

10.4 City of Banning Development Impact (Traffic Control) Fee¹

The City of Banning has developed individual impact fees for five infrastructure categories, which are combined together under one fee known as the Development Impact Fee. The five infrastructure categories are as follows:

- Traffic/Control;
- Fire/Emergency Services;
- Police;
- General Government; and
- Parks and Recreation.

The Traffic/Control Development Impact Fees were derived using a plan-based methodology, which incorporates planned capacity and signalization improvements for 2005 to 2025 time-period. The signalization of the following intersections is included in the traffic control portion of the development fees:

- Lincoln Street/San Gorgonio Avenue;
- Lincoln Street/8th Street;
- Lincoln Street/Hargrave Street;
- Lincoln Street/22nd Street;
- Highland Home Road/Westward Avenue;
- Highland Home Road/Ramsey Street;
- Highland Home Road/Wilson Street;
- Highland Home Road/Sun Lakes Boulevard;
- Highland Springs Avenue/Wilson Street;
- Westward Avenue/San Gorgonio Avenue;
- Westward Avenue/Sunset Avenue;
- Westward Avenue/22nd Street;
- Westward Avenue/8th Street;
- Sunset Avenue/Lincoln Street;
- Sunset Avenue/Wilson Street;
- San Gorgonio Avenue/Wilson Street;

¹ City of Banning Development Impact Fee, June 2006.

- Ramsey Street/16th Street;
- 8th Street/Wilson Street;
- Jacinto View Road/Highland Home Road;
- Hargrave Street/Westward Avenue;
- Highland Springs Avenue/Sun Lakes Boulevard;
- Wilson Street/Mountain Avenue; and
- Wilson Street/Oregon Trail.

Of the intersections listed above, eight intersections were included in the Butterfield Specific Plan Traffic Impact Analysis. The City has initiated an update to this fee to include the signalization and improvements at the following additional intersections:

- Highland Springs Avenue/16th Street-Cougar Way;
- Highland Springs Avenue/F Street;
- Highland Springs Avenue/Starlight Avenue;
- Highland Home Road/Northern Loop;
- Highland Home Road/Beaumont Avenue;
- Highland Home Road/F street;
- Highland Home Road/D Street;
- Highland Home Road/Wilson Street;
- Highland Home Road/Ramsey Street;
- Sunset Avenue/Wilson Street;
- Sunset Avenue/Ramsey Street;
- Sunrise Avenue/Wilson Street;
- 16th Street/Wilson Street;
- 8th Street/I-10 Westbound Ramps;
- 8th Street/I-10 Eastbound Ramps;
- 4th Street/Wilson Street;
- San Gorgonio Avenue/Wilson Street;
- Sunset Avenue/Lincoln Street;
- 8th Street/Ramsey Street;
- 8th Street/Lincoln Street;
- Hargrave Street/Ramsey Street;
- Hargrave Street/I-10 Westbound Ramps;

- Hargrave Street/I-10 Eastbound Ramps;
- Hargrave Street/Lincoln Street; and
- Fields Road/I-10 Westbound Ramps.

Table AN summarizes funding sources for the improvements in the existing plus project (Phase III) and General Plan Build-out plus project scenarios for intersections in multiple jurisdictions at LOS C conditions. Table AO lists the summary of funding sources for the improvements in the existing plus project (Phase III) and General Plan Build-out plus project scenarios for intersections in multiple jurisdictions at LOS D conditions.

11.0 INTERNAL CIRCULATION

Previously referenced Figure 2 illustrates the internal street network for the proposed Butterfield Specific Plan. The street network that comprises these major streets has seven internal intersections within the project site. Both a.m. and p.m. peak hour intersection volumes that were obtained from the model were used to analyze the operating conditions of these seven internal intersections. Each intersection was analyzed as a stop-controlled intersection at the minor street approach only. Table AP shows that all the intersections operate acceptably at LOS C or better in a.m. and p.m. peak hour. Detailed HCM worksheets for the analyses are also included in Appendix H.

A signal warrant analysis was conducted for the seven intersections to determine if a signal is warranted at any of the intersections where a signal has been recommended as mitigation. As shown in Appendix G, all intersections where a signal has been recommended as mitigation warrant signals.

Table AN - Summary of Future Improvements

Intersection Turning Movement

Prepared by:

National Data & Surveying Services

Sunset Ave and I-10 WB Ramps , City of Banning

Date: 5/20/2010

Day: Thursday

Project #: 10-6035-033

Intersection Turning Movement

Prepared by:

National Data & Surveying Services

Sunset Ave and I-10 EB Ramps , City of Banning

Date: 5/20/2010

Day: Thursday

Project #: 10-6035-034

Intersection Turning Movement

Prepared by:

National Data & Surveying Services

Sunrise Ave and Wilson St., City of Banning

Date: 5/20/2010

Day: Thursday

Project #: 10-6035-035

Intersection Turning Movement

Prepared by:

National Data & Surveying Services

16th St and Wilson St , City of Banning

Date: 5/20/2010

Day: Thursday

Project #: 10-6035-036

Intersection Turning Movement

Prepared by:

National Data & Surveying Services

8th St and Wilson St, City of Banning

Date: 5/20/2010

Day: Thursday

Project #: 10-6035-037

Intersection Turning Movement

Prepared by:

National Data & Surveying Services

8th St and I-10 WB Ramps , City of Banning

Date: 5/20/2010

Day: Thursday

Project #: 10-6035-038

Intersection Turning Movement

Prepared by:

National Data & Surveying Services

8th St and I-10 EB Ramps , City of Banning

Date: 5/20/2010

Day: Thursday

Project #: 10-6035-039

Intersection Turning Movement

Prepared by:

National Data & Surveying Services

4th St and Wilson St, City of Banning

Date: 5/20/2010

Day: Thursday

Project #: 10-6035-040

Intersection Turning Movement

Prepared by:

National Data & Surveying Services

San Gorgonio and Wilson St , City of Banning

Date: 5/20/2010

Day: Thursday

Project #: 10-6035-041

Intersection Turning Movement

Prepared by:

National Data & Surveying Services

8th St and Ramsey St , City of Banning

Date: 5/19/2010

Day: Wednesday

Project #: 10-6035-042
